**China's Industrial Technology** Shulin Gu, 2004-01-14 Offering a comprehensive review of reform policy followed by an examination of major approaches to institutional restructuring Shulin Gu explores the way in which China's industrial technology has responded to economic reforms At the heart of the work is the argument that market reform and organisational change are closely interdependent Gu outlines the interaction of the two in China and reveals the damage which may result if market reform is not accompanied by new organisational design Analysis of these issues is drawn from first hand experience of Chinese technology systems supported by insights from technological innovation economics and transaction cost economics      *Technology and Industrial Transformation of China* Yanqing Jiang, Jiwei Gu, 2022-10-30 This book explores how China's industrial transformation and development depend on technology and innovation and how

considerations about issues associated with technology and innovation may affect China's development strategies. Market oriented reforms initiated four decades ago have constantly fueled a high speed of development in China. The country's industrial structure has experienced rapid evolution. In the meantime, especially in the general context of globalization, the country has also opened to foreign trade and foreign direct investment, transforming itself from a virtually completely closed economy into a major trading nation and the largest developing country destination for foreign direct investment in the world. Technology is thought to be one of the key driving forces that shape the transformation of the Chinese economy. Owing to different speeds of innovation and technology diffusion, uneven development is one major issue in the process of China's industrial transformation under new trends of globalization. Substantial disparities across different Chinese regions, e.g. the gaps in regional industrial development and those in incomes and living standards, have been one prominent feature of China and are needless to say closely related to different speeds of innovation and technology diffusion. The relationship between technology diffusion, innovation and industrial development is an important yet complicated issue that deserves careful study. Considerations related to technology and innovation play a crucial role in leading and shaping China's development strategies and routes. Sustainable development of China creates strong pressures for continuous transforming, upgrading and restructuring of the Chinese economy, and in all of these processes, innovation and technology diffusion play a fundamental role. The book presents to the interested reader facts, thoughts, models, empirical results and discussions that shed light on those issues.
