Technological Systems and Economic Performance: The Case of Factory Automation B. Carlsson, 2012-12-06 In 1987 the Swedish National Board for Technical Development STU later becoming the Swedish National Board for Industrial and Technical Development NUTEK initiated a study of Sweden's Technological Systems and Future Development Potential A comprehensive interdisciplinary study was envisioned yielding not only useful insight but also a permanent competence base for future analyses of technological systems and technology policy in Sweden Three leading Swedish research institutes were invited to participate the Industrial Institute for Economic and Social Research in Stockholm the Department of Industrial Management and Economics at Chalmers University of Technology in Gothenburg and the Research Policy Institute at the University of Lund I was invited to direct the project The project group decided to focus initially on a particular technological system namely factory automation to be followed by similar studies of other systems Numerous publications have resulted from the project thus far The current volume represents a summary of our work on factory automation It consists of several original essays and of some previously published papers which have been edited in some cases substantially in order to form a comprehensive and coherent picture of a technological system To our knowledge this is the first in depth analysis of a technological system designed as a component of a systematic study of technological systems more generally At the time of this writing three further studies on electronics and computers pharmaceuticals and powder technology are under way to be published in a later volume

The Social Construction of Technological Systems, anniversary edition Wiebe E. Bijker, Thomas Parke Hughes, Trevor Pinch, 2012-05-18 An anniversary edition of an influential book that introduced a groundbreaking approach to the study of science technology and society This pioneering book first published in 1987 launched the new field of social studies of

technology It introduced a method of inquiry social construction of technology or SCOT that became a key part of the wider discipline of science and technology studies The book helped the MIT Press shape its STS list and inspired the Inside Technology series The thirteen essays in the book tell stories about such varied technologies as thirteenth century galleys eighteenth century cooking stoves and twentieth century missile systems Taken together they affirm the fruitfulness of an approach to the study of technology that gives equal weight to technical social economic and political questions and they demonstrate the illuminating effects of the integration of empirics and theory The approaches in this volume collectively called SCOT after the volume s title have since broadened their scope and twenty five years after the publication of this book it is difficult to think of a technology that has not been studied from a SCOT perspective and impossible to think of a technology that cannot be studied that way

Multi-physics Modeling of Technological Systems Marc Budinger,Ion Hazyuk,Clément Coïc,2019-07-09 The development of mechatronic and multidomain technological systems requires the dynamic behavior to be simulated before detailed CAD geometry is available This book presents the fundamental concepts of multiphysics modeling with lumped parameters The approach adopted in this book based on examples is to start from the physical concepts move on to the models and their numerical implementation and finish with their analysis With this practical problem solving approach the reader will gain a deep understanding of multiphysics modeling of mechatronic or technological systems mixing mechanical power transmissions electrical circuits heat transfer devices and electromechanical or fluid power actuators Most of the book s examples are made using Modelica platforms but they can easily be implemented in other 0D 1D multidomain physical system simulation environments such as Amesim Simulink Simscape VHDL AMS and so on
