Wikipedia contributors, **Robot Ecology and the Science Fiction Film** J. P. Telotte,2016-01-22 This book offers the first specific application in film studies of what is generally known as ecology theory shifting attention from history to the in this case media environment It takes the robot as its subject because it has attained a status that resonates not only with some of the key concerns of contemporary culture over the last century but also with the very nature of film While the robot has given us a vehicle for exploring issues of gender race and a variety of forms of otherness and increasingly for asking questions about the very nature and meaning of life this image of an artificial being typically anthropomorphic also invariably

implicates the cinema's own and quite fundamental artificing of the human. Looking across genres across specific media forms and across closely linked conceptualizations Telotte sketches a context of interwoven influences and meanings. The result is that this study of the cinematic robot while mainly focused on science fiction film also incorporates its appearance in for example musicals cartoons television advertising toys and literature

*Cinema of Simulation: Hyperreal Hollywood in the Long 1990s* Randy Laist, 2016-09-22 Hyperreality is an Alice in Wonderland dimension where copies have no originals simulation is more real than reality and living dreams undermine the barriers between imagination and objective experience The most prominent philosopher of the hyperreal Jean Baudrillard formulated his concept of hyperreality throughout the 1980s but it was not until the 1990s that the end of the Cold War along with the proliferation of new reality bending technologies made hyperreality seem to come true In the lost decade between the fall of the Berlin Wall and 9 11 the nature of reality itself became a source of uncertainty a psychic condition that has been recognizably recorded by that seismograph of American consciousness Hollywood cinema The auteur cinema of the 1970s aimed for gritty realism and the most prominent feature of Reagan era cinema was its fantastic unrealism Clinton era cinema however is characterized by a prevailing mood of hyperrealism communicated in various ways by such benchmark films as JFK Pulp Fiction and The Matrix The hyperreal cinema of the 1990s conceives of the movie screen as neither a window on a preexisting social reality realism nor as a wormhole into a fantastic dream dimension escapism but as an arena in which images and reality exchange masks blend into one another and challenge the philosophical premises which differentiate them from one another Cinema of Simulation Hyperreal Hollywood in the Long 1990s provides a guided tour through the anxieties and fantasies reciprocally social and cinematic which characterize the surreal territory of the hyperreal
