Technological Innovation and Economic Change in the Iron Industry, 1850-1920 Robert A. Battis, 2018-03-26 Originally published in 1989 this study examines some new facets in the development of the iron industry in the USA between 1839 and 1921 through the study of an individual firm namely the Thoms Iron Company one of the leading merchant furnace companies It charts the end of the anthracite iron age and the changes which brought about the advent of open hearth steel and integrated steel works The book discusses the problems the managers of the firm faced with the appearance of industrial innovations which tended to undermine their firm's very existence and provided a new set of optimal conditions necessary for the survival of the firm It provides a clear understanding of the destructive forces of industrial innovation and the place of creative entrepreneurship in the survival of the firm

The Industrial Revolution in Iron Chris Evans, Göran Rydén, 2017-07-05 The essays in this volume each written by an acknowledged expert in the field trace the fortunes of British coal technology as it spread across the European continent from Sweden and Russia to the Alps and Spain and supply an authoritative picture of industrial transformation in one of the key industries of the 19th century In this period iron making in continental Europe was transformed by the take up of technologies such as coke smelting and iron puddling that had already revolutionised the British iron industry The transfer of British technologies was fundamental to European industrialisation but that transfer was not straightforward The techniques that had proved so successful in Britain had to be adapted to local circumstances elsewhere for charcoal fired techniques proved surprisingly durable More often than not as these studies show coal fired methods were incorporated into traditional production systems making for the proliferation of technological hybrids Overall it is diversity that stands out Some European regions southern Belgium came near to the British model others Spain persisted with charcoal technology into the late 19th century Some countries Sweden adopted British organisational principles but not the reliance on coal others Russia maintained different iron making sectors one coal based the other loyal to charcoal in parallel

history but in world history ushering in as it did a new era of sustained economic prosperity But what exactly was the industrial revolution And why did it occur in Britain when it did Ever since the expression was coined in the 19th century historians have been debating these questions and there now exists a large and complex historiography concerned with English industrialisation This short history of the British Industrial Revolution aimed at undergraduates sets out to answer these questions It will synthesise the latest research on British industrialisation into an exciting and interesting account of the industrial revolution Deploying clear argument lively language and a fresh set of organising themes this short history revisits one of the most central events in British history in a novel and accessible way This is an ideal text for undergraduate students studying the Industrial Revolution or 19th Century Britain

Technological Change and the British Iron Industry, 1700-1870 Charles K. Hyde, 2019-03-12 This book describes technological change in an industry that played a central role in the Industrial Revolution While earlier scholars have examined isolated aspects of ironmaking in the eighteenth and nineteenth century Britain Charles Hyde surveys all aspects of its development Costs prices profits shrewd leaders competition new inventions and productivity all figure in this story of a key industry during the major period of its evolution The author's account illuminates not only the nature of innovation in one industry but the nature of technological change in general using new data compiled from the records of the ironmaking concerns Professor Hyde considers each of the basic economic variables affecting entrepreneurial decisions He finds that ironmaking advanced through a process of gradual continuous change rather than through a series of discrete innovations The rate of diffusion of new techniques corresponded to their profitability when compared to that of existing means of production a finding that explains that timing of innovation Charles K Hyde is Assistant Professor of Social Science at Monteith College Wayne State University Originally published in 1977 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Britain and the Onset of Modernization in Brazil 1850-1914 Richard Graham, 1968-07-02 This is a detailed study of British influence in Brazil as a theme within the larger story of modernization The British were involved at key points in the initial stages of modernization Their hold upon the import export economy tended to slow down industrialization and there were other areas in which their presence acted as a brake upon Brazilian modernization But the British also fostered change British railways provided primary stimulus to the growth of coffee exports and since the British did not monopolize coffee production a large proportion of the profits remained in Brazilian hands for other uses Furthermore the burgeoning coffee economy shattered traditional economic social and political relationships opening up the way for other areas of growth The British role was not

confined to economic development They also contributed to the growth of a modern world view Spencerianism and the idea of progress for instance were not exotic and meaningless imports but an integral part of the transformation Brazil was experiencing

The Development of the Economies of Continental Europe 1850-1914 (Routledge Revivals) Alan Milward, S. Saul, 2012-08-06 This work first published in 1977 is a reissue of a trailblazing work the first textbook of economic history to deal comprehensively with the economic development of the whole continent in this period and to do so from a continental rather than a British perspective But it is more than merely a textbook it is an interpretative synthesis of the wide range of research on this subject in many countries As such it will be an indispensable guide for teachers and will extend and improve the scope of teaching by making available for the first time in English the results of continental research In addition it is a work of fundamental interest to economists in which theories and hypotheses of economic development are now examined in a much wider historical context In this way the book is an exploration of the objective validity of earlier theories and the starting point for further research into economic development and european history The work covers the continental development of the German and French economies after 1870 and then in that context analyses the development of the smaller western economies It then considers the relatively underdeveloped economies of eastern and southern Europe and includes the first attempt at a synthesis of economic development before 1914 in the Balkans It concludes with an analysis of the international economy and its relationship to the economic development of the continent
