In Defence of Science Jack W. Grove, 1989-12-15 Science holds a central role in the modern world yet its complex interrelationships with nature technology and politics are often misunderstood or seen from a false perspective In a series of essays that make extensive use of original work by sociologists historians and philosophers of science J W Grove explores the roles and relationships of science in modern technological society Modern Science can be viewed from four related perspectives It is an expression of human curiosity a passion to understand the natural world what it is made of how it is put together and how it works It is a body of practice a set of ways of finding out that distinguish it from other realms of inquiry It is a profession a body of men and women owing allegiance to the pursuit of knowledge and for those people a career And it is a prescriptive enterprise in that the increase of scientific understanding makes it possible to put nature to use in new kinds of technology Each of these aspects of science is today the focus of critical scrutiny and often outright hostility With many examples Grove exposes the threats to science today its identification with technology its subordination to the state the false claims made in its name and the popular intellectual forces that seek to denigrate it as a source of

human understanding and progress Ecomodernism: Technology, Politics and The Climate Crisis Jonathan Symons, 2019-07-09 Is climate catastrophe inevitable In a world of extreme inequality rising nationalism and mounting carbon emissions the future looks gloomy Yet one group of environmentalists the ecomodernists are optimistic They argue that technological innovation and universal human development hold the keys to an ecologically vibrant future However this perspective which advocates fighting climate change with all available technologies including nuclear power synthetic biology and others not yet invented is deeply controversial because it rejects the Green movement's calls for greater harmony with nature In this book Jonathan Symons offers a qualified defence of the ecomodernist vision Ecomodernism he explains is neither as radical or reactionary as its critics claim but belongs in the social democratic tradition promoting a third way between laissez faire and anti capitalism Critiquing and extending ecomodernist ideas Symons argues that states should defend against climate threats through transformative investments in technological innovation A good Anthropocene is still possible but only if we double down on science and humanism to push beyond the limits to growth
