Technology Of World War I:

The Technology of World War I Stewart Ross, 2003 The Technology of World War I explores the dramatic developments in military technology during World War I It shows how the Industrial Revolution changed the tools of war from the production of high grade iron and steel for warships to the lethal products created by the chemical industry This book also examines how the superiority of defensive weapons led to the lack of movement and resulting stalemate on the front lines during World War I It looks at the horrors of trench warfare and considers how the combination of larger armies and improved weaponry was to lead to unprecedented numbers of casualties Finally it discusses the far reaching effects of the war's technological advances in medicine transportation and communications and looks at the cost of the war in financial and human terms to the countries involved *Military Technology of the First World War* Wolfgang Fleischer, 2017 Like any war before or since the First World War formed the catalyst for a wealth of technical inventions with only one goal in mind to inflict as much damage on the opponent as possible No one would have dreamed that as a result of these new technologies the death tolls on all sides would be so high nor would the physical destruction of the opposition have seemed possible In this new work Wolfgang Fleischer has meticulously documented all the weaponry was used by the Central Powers and their opponents including machine guns artillery guns gas the first armored combat vehicles aircraft and submarines

Science, Technology, and Warfare Monte D. Wright, Lawrence J. Paszek,1971 The nature of warfare has always been largely determined by contemporary technology Instances of technological change undertaken for the sake of military advantage have also been relatively common in history The relationships between science and warfare however have been much more variable and ambiguous The papers and discussions of the Symposium investigate selected aspects of the complex relationships between science and technology on the one hand and warfare on the other from the Renaissance to the 1960s In the first session Professor Hall takes up in turn the possible areas of interaction between science exterior ballistics engineering explosives mechanics and metallurgy and military technology edge weapons cannons and mortars fortification and siege warfare and small arms in the 15th 16th and 17th centuries The notion that science is pursued for utilitarian ends Hall finds is an unhistorical projection backward from our own age He excludes navigation and medicine from consideration because they were civil as well as military concerns In spite of the pleading of certain early propagandists of the Empire of Man over Nature and in spite of the elaborate sketches of military engines in Leonardo s notebooks military technology was largely innocent of scientific method The developments in fortification required mathematical skills but nothing more than elementary geometry and arithmetic Mathematicians studied the ancient problem of the trajectory of projectiles but their efforts affected neither the design nor the use of guns The range tables they provided were not even usable with the guns of the time The solution of the trajectory problem would await Benjamin Robins and the 18th century Professor Hale supports Hall s conclusion with three arguments In the 16th and 17th centuries armies were so organized as to preclude any productive contact with the worlds of science and technology
