Technology's Crucible James Martin,1987      **Ion Implantation Technology - 94** S. Coffa,G. Ferla,E. Rimini,F. Priolo,1995-05-16 The aim of these proceedings is to present and stimulate discussion on the many subjects related to ion implantation among a broad mix of specialists from areas as diverse as materials science device production and advanced ion implanters The contents open with a paper on the future developments of the microelectronics industry in Europe within the framework of the global competition The subsequent invited and oral presentations cover in detail the following areas trends in processing and devices ion solid interaction materials science issues advanced implanter systems process control and yield future trends and applications      Science and Civilisation in China: Volume 5, Chemistry and Chemical Technology, Part 11, Ferrous Metallurgy ,      **Studies in Ancient Technology, Volume 6 Heat and Heating: Refrigeration, the Art of Cooling and Producing Cold: Light** Forbes,2023-07-24      *The History and Future of Technology* Robert U. Ayres,2021-07-27 Eminent physicist and economist Robert Ayres examines the history of technology as a change agent in society focusing on societal roots rather than technology as an autonomous self perpetuating phenomenon With rare exceptions technology is developed in response to societal needs that have evolutionary roots and causes In our genus Homo language evolved in response to a need for our ancestors to communicate both in the moment and to posterity A band of hunters had no chance in competition with predators that were larger and faster without this type of organization which eventually gave birth to writing and music The steam engine did not leap fully formed from the brain of James Watt It evolved from a need to pump water out of coal mines driven by a need to burn coal instead of firewood in turn due to deforestation Later the steam engine made machines and mechanization possible Even quite simple machines increased human productivity by a factor of hundreds if not thousands That was the Industrial Revolution If we count electricity and the automobile as a second industrial revolution and the digital computer as the beginning of a third the world is now on the cusp of a fourth revolution led by microbiology These industrial revolutions have benefited many in the short term but devastated the Earth s ecosystems Can technology save the human race from the catastrophic consequences of its past success That is the question this book will try to answer      *Production Technology* K. L. Narayana,2010-09-30 A salient feature of this book is the combination of qualitative as well as quantitative treatment while dealing with the subject The book is presented in a simple and lucid style to aid the students understand the subject at a glance Several worked out examples review and objective type questions are also given at the end of each chapter It is an ideal introductory textbook in Production Technology      *Handbook of Advanced Radioactive Waste Conditioning Technologies* Michael I. Ojovan,2011-01-24 Radioactive wastes are generated from a wide range of sources including the power industry and medical and scientific research institutions presenting a range of challenges in dealing with a diverse set of radionuclides of varying concentrations Conditioning technologies are essential for the encapsulation and immobilisation of these radioactive wastes

forming the initial engineered barrier required for their transportation storage and disposal The need to ensure the long term performance of radioactive waste forms is a key driver of the development of advanced conditioning technologies The Handbook of advanced radioactive waste conditioning technologies provides a comprehensive and systematic reference on the various options available and under development for the treatment and immobilisation of radioactive wastes The book opens with an introductory chapter on radioactive waste characterisation and selection of conditioning technologies Part one reviews the main radioactive waste treatment processes and conditioning technologies including volume reduction techniques such as compaction incineration and plasma treatment as well as encapsulation methods such as cementation calcination and vitrification This coverage is extended in part two with in depth reviews of the development of advanced materials for radioactive waste conditioning including geopolymers glass and ceramic matrices for nuclear waste immobilisation and waste packages and containers for disposal Finally part three reviews the long term performance assessment and knowledge management techniques applicable to both spent nuclear fuels and solid radioactive waste forms With its distinguished international team of contributors the Handbook of advanced radioactive waste conditioning technologies is a standard reference for all radioactive waste management professionals radiochemists academics and researchers involved in the development of the nuclear fuel cycle Provides a comprehensive and systematic reference on the various options available and under development for the treatment and immobilisation of radioactive wastes Explores radioactive waste characterisation and selection of conditioning technologies including the development of advanced materials for radioactive waste conditioning Assesses the main radioactive waste treatment processes and conditioning technologies including volume reduction techniques such as compaction
