Tectonic Deformation Of The Songshan Are:

Main Tectonic Events and Metallogeny of the North China Craton Mingguo Zhai, Yue Zhao, Taiping Zhao, 2016-07-25 This book focuses on the metallogeny and main tectonic events of the North China Craton from early Precambrian to Phanerozoic. It covers the Archean crustal growth, Paleoproterozoic rifting, subduction, collision processes, Great Oxidation Event, Meso-Neoproterozoic multiple rifting, Phanerozoic reworking of the North China Craton, as well as metallogeny related to above different processes. The North China Craton is one of the oldest cratons in the world. It has experienced a complex geological evolution since the early Precambrian and carries important records of secular changes in tectonics and metallogeny. It provides a systematic review and new results on the growth and evolution of the North China Craton and metallogeny. It will be of broad interest to the earth scientists working in the fields of economic geology, geochemistry and tectonics of the North China Craton and eastern Asian.

Tectonics Evgenii Sharkov, 2018-05-16 This book is devoted to different aspects of tectonic researches. New results and interpretations are presented here for diverse tectonic settings. Most of the chapters include up-to-date materials of detailed geological investigations, often combined with geophysical data which can help understand more clearly the essence of mechanisms of different tectonic processes. Some chapters are devoted to the tectonic evolution of regions: East Antarctica, East Kazakhstan, Mongol-Okhotsk orogenic belt, and others have dealt with the different aspects of tectonic events: influence of detachment structural deformation on pore structure evolution in shales, evolution of drainage in response to brittle-ductile dynamics and surface processes, soft sediment deformation structures triggered by the modern earthquakes and post-opening deformation history of the Japan Sea back arc basin.

Fractals in Rock Mechanics Heping Xie, 2020-12-17 Important developments in the progress of the theory of rock mechanics during recent years are based on fractals and damage mechanics. The concept of fractals has proved to be a useful way of describing the statistics of naturally occurring geometries. Natural objects from mountains and coastlines to clouds and forests are found to have boundaries best described as fractals. Fluid flow through jointed rock masses and clusterings of earthquakes are found to follow fractal patterns in time and space. Fracturing in rocks at all scales from the microscale (microcracks) to the continental scale (megafaults) can lead to fractal structures. The process of diagenesis and pore geometry of sedimentary rock can be quantitatively described by fractals, etc. The book is mainly concerned with these developments as related to fractal

descriptions of fragmentations damage and fracture of rocks rock burst joint roughness rock porosity and permeability rock grain growth rock and soil particles shear slips fluid flow through jointed rocks faults earthquake clustering and so on The prime concerns of the book are to give a simple account of the basic concepts methods of fractal geometry and their applications to rock mechanics geology and seismology and also to discuss damage mechanics of rocks and its application to mining engineering The book can be used as a textbook for graduate students by university teachers to prepare courses and seminars and by active scientists who want to become familiar with a fascinating new field

Early Continent Evolution of the North China Craton Mingguo Zhai, Peng Peng, Yanyan Zhou, Lei Zhao, 2024-03-27 Early Continent Evolution of the North China Craton discusses the tectono thermal regimes of the early continental crust in the North China Craton NCC from the Hadean to the early Paleoproterozoic reconstructing the evolutionary framework and facilitating comprehensive understanding of the early continent evolution of the NCC The book systematically summarizes the Neoarchean metamorphism of the NCC and discusses the implications for the tectonic models of the NCC through compiling evolutionary information of the Hadean to the early Paleoproterozoic sequences in the NCC This allows for comprehensive summarizations and discussions on the tectonic framework of the NCC during this critical period Researchers academics and students in geology especially Precambrian Geology geomorphology geophysics and geological engineering will benefit from using this book in applying tectonic models to other cratonic blocks globally and will understand evolutionary information of the largest and oldest cratonic block in China Completely covers all key issues and research frontiers of the early continental evolution of the North China Craton NCC from the Hadean to the early Paleoproterozoic Systematically summarizes the Neoarchean metamorphism of the NCC and discusses the implications for tectonic models Includes discussion on controversial views on tectonic regimes of the NCC during the Archean to early Paleoproterozoic with objective conclusions

Precambrian Crustal Evolution of China Jin Bai, 1998-08-20 Precambrian Crustal Evolution of China integrates the theory of plate tectonics structural geology and petrology to identify the tectonic and metamorphic environment in different stages of development of the Archaean and Proterozoic crust Further the evolution of the Precambrian atmosphere and hydrosphere is approached by using geochemical data and traces of life For the first time the results of the study of the Precambrian geology of China are made available in English to scientists and students not having access to the huge amount of Chinese literature
