Raman Amplifiers for Telecommunications 1 Mohammad N. Islam,2007-06-30

I remember vividly the first time that I heard about the fiber amplifier. At that time of course it was the erbium doped fiber amplifier the predecessor of the Raman amplifier that is the subject of this book. It was an early morning in a forgotten year in Murray Hill New Jersey at one of our Bell Labs monthly research staff meetings. About twenty directors and executive directors of research organizations clustered around a long table in the imposing executive conference room. Arno Penzias the vice president of research presided at the foot of the table. Everyone who participated in those research staff meetings will long remember their culture and atmosphere. Arno would pick an arbitrary starting point somewhere around the table and the designated person would head to the front of the table to give a short talk on something new in his or her research area. This first speaker would invariably fiddle helplessly with the controls embedded in the podium that controlled the viewgraph projector but eventually we would hear machinery grinding in the back room as a large hidden mirror moved into place. We would all wait quietly arranging and choosing our own viewgraphs from the piles that lay on the table in front of every participant.

Raman Amplifiers for Telecommunications 2 Mohammad N. Islam,2003-11-11

This edited monograph is written by leading experts in this area and is the first book entirely devoted to Raman amplification. Three sections include extensive background on Raman physics, descriptions of sub systems and modules utilizing Raman technology and a review of current state of the art systems.

Telecommunications Reform in the Asia-Pacific Region

Allan Brown, Moazzem Hossain, Duc-Tho Nguyen,2005-02-24 This book attempts to draw lessons from the experiences of developed as well as developing countries in carrying out telecommunications reform. Contributors come from academia as well as from stakeholders in telecommunications policy in a dozen countries mostly in the Asia Pacific region. Globally the telecommunications industry is undergoing major changes. Technological advances in the form of a vast number of new digitised services, ownership shifts as state owned carriers in many countries become fully or partly privatized and a general transition from monopolistic to more competitive market environments. The economic and regulatory experiences derived from these changes are explored and analyzed using the USA, the UK, Australia and Singapore to represent developed and newly industrialized countries and China, India, Indonesia, Malaysia, the Philippines, Sri Lanka, Thailand and Vietnam as examples of developing countries. The conclusions outlined in this timely volume hold important lessons for these as well as for other countries.
