Multidimensional Queueing Models in Telecommunication Networks Agassi Melikov, Leonid Ponomarenko, 2014-08-09

The increasing complexity of telecommunication networks requires us to develop adequate mathematical models We must find their characteristics optimize them subject to chosen criteria and develop the corresponding control algorithms Multidimensional queueing models are used to design and optimize modern and next generation networks NGN The central problem of the related mathematical theory is to apply multidimensional and large size queueing models to improve efficiency In this book new methods are successively developed and applied to solve related problems The book is recommended for researchers engaged with the mathematical theory of telecommunications traffic Telecommunication Networks John Edward Flood, 1997 This book discusses the structure and performance of networks in the context of the services they provide Chapters are devoted to public and private networks ISDN intelligent networks mobile radio networks and broadband networks *Teletraffic and Datatraffic* Arne Jensen, Villy Bæk Iversen, 1992 This most recent book from the International Teletraffic Congress Workshops provides valuable insights to the teletraffic engineering particularities and problems often found in developing countries The editors continue the excellence of previous ITC volumes Vol 14 1991 edited by A Jensen and V B Iversen and Vol 15 1991 edited by J W Cohen and C B Pack by providing a collection of papers covering a wide variety of planning and implementation issues including the engineering of systems methods of habit examination of users with regard to various types of services network management tariff considerations and systems engineering traffic engineering A final section providing historical highlights in the field is additionally included **Difference Equations with Applications to Queues** David L. Jagerman, 2000-08-22 Presents a theory of difference and functional equations with continuous argument based on a generalization of the Riemann integral introduced by N E Norlund allowing differentiation with respect to the independent variable and permitting greater flexibility in constructing solutions and approximations Discusses linear transformations that state conditions for convergence of Newton series and Norlund sums *Modeling and Dimensioning of Mobile Wireless Networks* Maciej Stasiak, Mariusz Glabowski, Arkadiusz Wisniewski, Piotr

Zwierzykowski, 2010-12-09 This book is a must read for all network planners and other professionals wishing to improve the quality and cost efficiency of 3G and LTE networks In this book the authors address the architecture of the 2 3G network and the Long Term Evolution LTE network The book proposes analytical models that make the analysis and dimensioning of the most important interfaces i e WCDMA or Iub possible Furthermore the authors include descriptions of fundamental technological issues in 2 3 G networks basic traffic engineering models and frequent examples of the application of analytical models in the analysis and dimensioning of the interface of cellular networks The specific knowledge included in the content will enable the reader to understand and then to prepare appropriate programming softwares that will allow them to evaluate quality parameters of cellular networks i e blocking probabilities or call losses Additionally the book presents models for the analysis and dimensioning of the Wideband Code Division Multiple Access WCDMA radio interface and the Iub interface both carrying a mixture of Release 99 traffic R99 and High Speed Packet Access HSPA traffic streams Finally the analytical models presented in the book can be also used in the process of modeling and optimization of LTE networks

Key Features Describes the architecture and the modes of operation of the cellular 2 3 4G systems and the LTE network Covers the traffic theory and engineering within the context of mobile networks Presents original analytical methods that enable their users to dimension selected interfaces of cellular networks Discusses models for the analysis and dimensioning of the Wideband Code Division Multiple Access WCDMA radio interface and the Iub interface both carrying a mixture of Release 99 traffic R99 and High Speed Packet Access HSPA traffic streams Includes problems as well as an accompanying website containing solutions software tools and interactive flash animations <http://wiley.teletraffic.pl> This book will be an invaluable guide for professional engineers radio planning engineers optimization engineers transmission engineers core network engineers Service Management engineers working in the areas of mobile wireless networks technology not only in optimization process but also in profitability assessment of newly implemented services i e in NPV Net Present Value analysis and researchers and scientists Advanced students in the fields of mobile communications networks and systems will also find this book insightful

Multi-Fractal Traffic and Anomaly Detection in Computer Communications Ming Li, 2022-12-29 This book provides a comprehensive theory of mono and multi fractal traffic including the basics of long range dependent time series and 1/f noise ergodicity and predictability of traffic traffic modeling and simulation stationarity tests of traffic traffic measurement and the anomaly detection of traffic in communications networks Proving that mono fractal LRD time series is ergodic the book exhibits that LRD traffic is stationary The author shows that the stationarity of multi fractal traffic relies on observation time scales and proposes multi fractional generalized Cauchy processes and modified multi fractional Gaussian noise The book also establishes a set of guidelines for determining the record length of traffic in measurement Moreover it presents an approach of traffic simulation as well as the anomaly detection of traffic under distributed denial of service attacks Scholars and graduates studying network traffic in computer science will find the book beneficial
