Werger, A.C. van Bruggen, 2012-12-06 Southern Africa is certainly not a naturally bounded area so that there are several possibilities for delineating it and concepts about its extent Wellington discussed the various possibilities for delineation and suggested that one line stands out more clearly and definitely as a physical boundary than any other namely the South Equatorial Divide the watershed between the Zaïre Cuanza and Rufiji Rivers on the one hand and the Zambezi Cunene and Rovuma Rivers on the other This South Equatorial Divide is indeed a major line of separation for some organisms and is also applicable in a certain geographical sense though it does not possess the slightest significance for many other groups of organisms ecosystems or geographical and physical features of Africa The placing of the northern boundary of southern Africa differs in fact strongly per scientific discipline and is also influenced by practical considerations regarding the possibilities of scientific work as subordinate to certain political realities and historically grown traditions This is illustrated for example in such works as the Flora of Southern Africa where the northern boundary of the area is conceived as the northern and eastern political boundaries of South West Africa South Africa and Swaziland Botswana traditionally included in the area covered by the Flora Zambesiaca thus forms a large wedge in Southern Africa **Habitats** DK, 2023-10-24 Celebrates and explains the astonishing range of habitats on Earth and the intricate balance of their animal and plant communities This book is a beautiful visual reference to the world's natural habitats and the plants and animals that live there It explores global habitat types including desert Arctic tundra and tropical forest and distinctive regional habitats such as the windswept puna grasslands of the Andes or the dripping fern clad rainforests of New Zealand Packed with fascinating illustrations the book analyzes how each habitat works and examines its unique combination of plants and animals along with the features that suit them to live there It then goes deeper telling stories about how the inhabitants relate to one another and interact Stories are told using images and graphics showing what is going on in the natural ecosystem The stories include survival strategies and life cycles how pollinators fertilize plants and how animals distribute the seeds how similar species divide up food or living space to avoid competition and how some species cooperate in intimate partnerships Earth's pristine wildernesses are dwindling so the book includes national parks wildlife reserves and other protected areas and the conservation efforts needed to preserve our precious biological diversity Teaching of Geography Dr. Rafiq Ahmad Hajam, Dr. Shahnawaz Ahmad Baba , In writing this book entitled Teaching of Geography Fundamentals

Principles and Methods the authors have been driven by two important parameters The first one is that a person who wants to get training in the teaching of geography he she must know the fundamentals of the subject The B Ed students come from different academic backgrounds and have no basic understanding of the discipline With this in mind we have incorporated many chapters in this book concerning with the basic concepts nature and scope of the subject of geography Secondly many of the books written so far contain inadequate methodologies and evaluation schemes used in the discipline of teaching of geography In this connection also some topics have been set to deal with the selection of teaching objectives teaching methodologies teaching plans paper setting and evaluation schemes There may also be a number of other factors that prompted us to take this venture The present work is written just to help the students and facilitate their scholastic journey The present work fulfills the objectives of curriculum designed for the B Ed students with good accuracy and preciseness
