New Age Materials and Construction

TENSILE STRUCTURES

- The term tensile structures describes the category of buildings in which the **load bearing capacity is achieved through tension stress** in the majority of the components, such as cables, technical fabrics or foils.
- It can also be defined as a structure where the **exterior shell is a fabric material spread over a framework**. The fabric is maintained in tension in all directions to provide stability.
- The only exception is represented by rigid boundaries and structural members which are generally subjected to
