Expert Systems in Environmental Planning Jeff R. Wright, Lyna

L. Wiggins, Ravinder K. Jain, T. John Kim, 2012-12-06 The connections between economics planning and the environment are receiving increased attention among scholars and policy makers in many countries The common denominator among these three variables is the earth's life support systems the ecosystems on which the world depends When we describe our physical surroundings as a collection of possible uses we are establishing linkages between economics planning and the environment Because possible alternative uses compete with each other and conflicts arise over scarce land resources the varying environmental impacts of alternative uses are major concerns for the current as well as the next generation How to achieve sustainable development is the pressing question for today's environmental professionals Environmental planners and engineers help us study the implications of our choices and new technologies and techniques that improve the practice of environmental planning should enhance our ability to protect our future The depletion of the earth's natural resources and loss of biodiversity the degradation of air land and water quality the accumulation of greenhouse gases leading to changes in our climate and the depletion of the ozone layer comprise only a partial list of environmental issues that concern our policy makers To support their decisions environmental planning must be a multidimensional and multidisciplinary activity that incorporates social economic political geographical and technical factors Solutions for problems in these areas frequently re

Schwarz, 2014-05-10 Handbook of VLSI Chip Design and Expert Systems provides information pertinent to the fundamental aspects of expert systems which provides a knowledge based approach to problem solving This book discusses the use of expert systems in every possible subtask of VLSI chip design as well as in the interrelations between the subtasks Organized into nine chapters this book begins with an overview of design automation which can be identified as Computer Aided Design of Circuits and Systems CAD/CAS This text then presents the progress in artificial intelligence with emphasis on expert systems Other chapters consider the impact of design automation which exploits the basic capabilities of computers to perform complex calculations and to handle huge amounts of data with a high speed and accuracy This book discusses as well the characterization of microprocessors The final chapter deals with interactive I/O devices This book is a valuable resource for system design experts circuit analysts and designers logic designers device engineers technologists and application specific designers

Expert Systems in Structural Safety Assessment Aleksandar S. Jovanovic, Karl F. Kussmaul, Alfredo C. Lucia, Piero P. Bonissone, 2013-03-08 Structural safety of industrial systems and components raises a steadily growing public scientific and engineering interest and causes permanent development of methods and techniques used for its assessment In addition to the well established engineering methods applied in the field several new methods and tools have emerged recently Among them the most novel ones are probably those related to expert system applications appearing as an important possible improvement of the current engineering practice The issue has been addressed by the international course EXPERT SYSTEMS IN STRUCTURAL SAFETY ASSESSMENT organized by MPA Stuttgart and JRC Ispra Stuttgart October 2-4 1989 and the proceedings of the course are contained in this volume of the Lecture Notes in Engineering The contributions invited lectures tackle the issues usually confronting developers and users of expert systems applied in structural engineering i.e. in structural safety and integrity assessment Both the book and the course are a combination of a tutorial and of presentation of the current achievements in the field Starting from the basic elements of expert systems knowledge based systems the book should guide the reader up to the applications in various particular sub domains

Advances in Expert Systems Petrică Vizureanu, 2012-12-05 Intelligent systems known as expert systems serve to this purpose in the extent that they have signed as facilitators in this process These are systems that are based on expert knowledge on any subject in order to emulate human expertise in the specific field To obtain this knowledge the knowledge engineers also called software engineers need to develop methodologies for intelligent systems In this area there is still no unified methodology that provides effective methods notations and tools to aid in development

Knowledge-Based Image Processing Systems Deryn Graham, Anthony Barrett, 2012-12-06 Knowledge based or expert systems and image processing have been applied to many domains but although both fields frequently address common application areas they are rarely applied together Often a combined knowledge based system and image processing approach can be highly appropriate and this book provides an insight into both areas and show students how a judicious mix of the two can result in a more effective system The authors include detailed case studies to illustrate the two approaches as well as worked examples and solutions to problems throughout the text Third and fourth year undergraduates and MSc students with some computer science background will find this book invaluable Postgraduates and researchers looking for an introduction to either area or ways to combine the two will also welcome this clearly written and comprehensive text
