The Language Of Perspective Taking:

The Language of Perspective Taking Marilyn M. Toomey, 2000 Designed to help students understand other people's feelings and see different points of view *Perspective Taking in Language* Carla Contemori, Petra Hendriks, Franziska Köder, Emar Maier, Jorrig Vogels, Sonja Zeman, 2023-05-02 **Perspective Taking: building a neurocognitive framework for integrating the "social" and the "spatial"** Klaus Kessler, Sarah H Creem-Regehr, Antonia Hamilton, 2015-06-08

Background Interacting with other people involves spatial awareness of one's own body and the other's body and viewpoint. In the past, social cognition has focused largely on belief reasoning which is abstracted away from spatial and bodily representations while there is a strong tradition of work on spatial and object representation which does not consider social interactions. These two domains have flourished independently. A small but growing body of research examines how awareness of space and body relates to the ability to interpret and interact with others. This also builds on the growing awareness that many cognitive processes are embodied which could be of relevance for the integration of the social and spatial domains. Online mental transformations of spatial representations have been shown to rely on simulated body movements and various aspects of social interaction have been related to the simulation of a conspecific's behaviour within the observer's bodily repertoire. Both dimensions of embodied transformations or mappings seem to serve the purpose of establishing alignment between the observer and a target. In spatial cognition research, the target is spatially defined as a particular viewpoint or frame of reference. FOR yet in social interaction research, another viewpoint is occupied by another's mind which crucially requires perspective taking in the sense of considering what another person experiences from a different viewpoint. Perspective taking has been studied in different ways within developmental psychology, cognitive psychology, psycholinguistics, neuropsychology, and cognitive neuroscience over the last few decades yet integrative approaches for channelling all information into a unified account of perspective taking and viewpoint transformations have not been presented so far.

Aims This Research Topic aims to bring together the social and the spatial and to highlight findings and methods which can unify research across areas. In particular, the topic aims to advance our current theories and set the stage for future developments of the field by clarifying and linking theoretical concepts across disciplines.

Scope The focus of this Research Topic is on the SPATIAL and the SOCIAL and we anticipate that all submissions will touch on both aspects and will explicitly attempt to bridge conceptual gaps. Social questions could include questions of how people judge another person's viewpoint or spatial capacities or how they imagine themselves from different points of view. Spatial questions could include consideration of different physical configurations of the body and the arrangement of different viewpoints including mental rotation of objects or viewpoints that have social relevance. Questions could also relate to how individual differences in personality, sex, development, culture, species, etc. influence or determine social and spatial perspective judgements. Many different methods can be used to explore perspective taking including mental chronometry, behavioural tasks, EEG, MEG, and

fMRI child development neuropsychological patients virtual reality and more Bringing together results and approaches from these different domains is a key aim of this Research Topic We welcome submissions of experimental papers reviews and theory papers which cover these topics Interbehaviorism Linda J. Learning through Language Vibeke Grøver, Paola Uccelli, Meredith Rowe, Elena Lieven, 2019-05-09 Explores how children develop linguistic and literary competence from early childhood into adolescence in a diverse range of linguistic contexts

Language Management Natalie Victoria Wilmot, 2022-08-12 This book draws on case studies of language management within British organisations to examine the decisions they make about language diversity in their professional communications in order to be successful in a multilingual world It explores the practices that the organisations use to manage language diversity in interorganisational relationships and why certain practices occur in some situations and not others The book highlights how organisations rely on individual employees to perform a variety of language tasks and the implications of this the effect of English as a global lingua franca and the translation challenges which organisations face The book demonstrates that practices to manage language diversity are often a result of the resources organisations have at given moments in time rather than being part of a deliberate language management strategy

Shaping Organization Form Gerardine DeSanctis, Janet Fulk, 1999-07-20 Shaping Organization Form considers the role of new communication technologies in shaping organizations today and in the future Four key themes are considered in depth changes in technology changes in organizational form and their mutual influence on one another evolutionary processes in organizations and the ways in which technology can influence these processes the development of organizational communities and inter organizational relationships that are mediated by electronic communication systems and major controversies surrounding electronically mediated organizations and directions for future research that flow out of these controversies

Visual language Wendy Sandler, Marianne Gullberg, Carol Padden, 2019-11-04 Traditionally research on human language has taken speech and written language as the only domains of investigation However there is now a wealth of empirical studies documenting visual aspects of language ranging from rich studies of sign languages which are self contained visual language systems to the field of gesture studies which examines speech associated gestures facial expressions and other bodily movements related to communicative expressions But despite this large body of work sign language and gestures are rarely treated together in theoretical discussions This volume aims to remedy that by considering both types of visual language jointly in order to transcend artificial theoretical divides and to arrive at a comprehensive account of the human language faculty This collection seeks to pave the way for an inherently multimodal view of language in which visible actions of the body play a crucial role The 19 papers in this volume address four broad and overlapping topics 1 the multimodal nature of language 2 multimodal representation of meaning 3 multimodal and multichannel prosody and 4 acquisition and development of visual language in children and adults
