**The Unnatural History of the Sea** Callum Roberts, 2009-01-05 Humanity can make short work of the oceans creatures In 1741 hungry explorers discovered herds of Steller's sea cow in the Bering Strait and in less than thirty years the amiable beast had been harpooned into extinction It's a classic story but a key fact is often omitted Bering Island was the last redoubt of a species that had been decimated by hunting and habitat loss years before the explorers set sail As Callum M Roberts reveals in The Unnatural History of the Sea the oceans bounty didn't disappear overnight While today's fishing industry is ruthlessly efficient intense exploitation began not in the modern era or even with the dawn of industrialization but in the eleventh century in medieval Europe Roberts explores this long and colorful history of commercial fishing taking readers around the world and through the centuries to witness the transformation of the seas Drawing on firsthand accounts of early explorers pirates merchants fishers and travelers the book recreates the oceans of the past waters teeming with whales sea lions sea otters turtles and giant fish The abundance of marine life described by fifteenth century seafarers is almost unimaginable today but Roberts both brings it alive and artfully traces its depletion Collapsing fisheries he shows are simply the latest chapter in a long history of unfettered commercialization of the seas The story does not end with an empty ocean Instead Roberts describes how we might restore the splendor and prosperity of the seas through smarter management of our resources and some simple restraint From the coasts of Florida to New Zealand marine reserves have fostered spectacular recovery of plants and animals to levels not seen in a century They prove that history need not repeat itself we can leave the oceans richer than we found them

*The High Seas* Olive Heffernan, 2024-05-21 In this essential guide to the half of our blue planet we call the high seas Will McCallum author of *How to Give Up Plastic* one of the world's leading voices on the issue tracks the race to exploit and protect our last frontier Two thirds of the world's oceans lie beyond national borders Owned by all nations and no nation simultaneously the high seas are home to some of the richest and most biodiverse environments on the planet But they are also home to exploitation on a scale that few of us have imagined Here out of sight and out of mind industry and economic progress rule and lax enforcement and apathy are the status quo underscored by a battle to control profit from protect or obliterate the world's largest wildest commons In this book Heffernan uncovers the truth behind deeply exploitative fishing practices investigates the potentially devastating impact of deep sea mining and holds to task the Silicon Valley interventionists whose solutions to climate change are often wildly optimistic radically irresponsible or both This is a powerful and deeply researched manifesto calling for the protection and preservation of this final frontier Published in Partnership with the David Suzuki Institute

*The Continental Shelf Beyond 200 Nautical Miles* Joanna Mossop, 2016-12-15 Under the United Nations Law of the Sea Convention States have sovereign rights over the resources of their continental shelf out to 200 nautical miles from the coast Where the physical shelf extends beyond 200 nautical miles States may exercise rights over those resources to the outer limits of the continental shelf More than 80 States may be entitled to claim sovereign rights over their continental shelf where it extends beyond 200 nautical miles from their coast and the Commission on the Limits of the Continental Shelf is currently examining many of these claims This book examines the nature of the rights and obligations of coastal States in this area with a particular focus on the options for regulating activities on the extended continental shelf Because the extended continental shelf lies below the high seas the area poses unique legal challenges for coastal States that are different from those faced in respect of the shelf within 200 nautical miles In addition the United Nations Convention on the Law of the Sea imposes some specific obligations that coastal States must comply with in respect of the extended continental shelf The book discusses the development of the concept of the extended continental shelf It explores a range of issues facing the coastal State in regulating matters such as environmental protection fishing bioprospecting exploitation of non living resources and marine scientific research on the extended continental shelf The book proposes a framework for navigating the intersection between the high seas and the extended continental shelf and minimising the potential for conflict between flag and coastal States
