Sleep Aging And Related Disorders:

Sleep, Aging and Related Disorders W. Emser, D. Kurtz, W. B. Webb, 1987-03-17 *Aging and Age-Related Disorders* Stephen Bondy, Kenneth Maiese, 2010-09-02 Features that characterize the aging process include the gradual accumulation of cell damage after prolonged exposure to oxidative and inflammatory events over a lifetime In addition to the accretion of lesions the intrinsic levels of pro oxidant and aberrant immune responses are elevated with age These adverse events are often further enhanced by the chronic and slow progressing diseases that characterize the senescent brain and cardiovascular system The incidence of some disorders such as Alzheimer s disease and vascular diseases are sufficiently prevalent in the extreme elderly that these disorders can arguably be considered normal Aging and Aging Related Disorders examines the interface between normal and pathological aging and illustrates how this border can sometimes be diffuse It explores and illustrates the processes underlying the means by which aging becomes increasingly associated with inappropriate levels of free radical activity and how this can serve as a platform for the progression of age related diseases The book provides chapters that examine the interactive relationship between systems in the body that can enhance or sometimes even limit cellular longevity In addition specific redox mechanisms in cells are discussed Another important aspect for aging discussed here is the close relationship between the systems of the body and exposure to environmental influences of oxidative stress that can affect both cellular senescence and a cell s nuclear DNA What may be even more interesting to note is that these external stressors are not simply confined to illnesses usually associated with aging but can be evident in maturing and young individuals A broad range of internationally recognized experts have contributed to this book Their aim is to successfully highlight emerging knowledge and therapy for the understanding of the basis and development of aging related disorders **Aging and Age-Related Disorders From Molecular Mechanisms to Therapies** Vladimir Titorenko, 2019-08-19 Aging of unicellular and multicellular eukaryotic organisms is a convoluted biological phenomenon which is manifested as an age related functional decline caused by progressive dysregulation of certain cellular and organismal processes Many chronic diseases are associated with human aging These aging associated diseases include cardiovascular diseases chronic obstructive pulmonary disease chronic kidney disease diabetes osteoarthritis osteoporosis sarcopenia stroke neurodegenerative diseases including Parkinson s Alzheimer s and Huntington s diseases and many forms of cancer Studies in yeast roundworms fruit flies fishes mice primates and humans have provided evidence that the major aspects and basic mechanisms of aging and aging associated pathology are conserved across phyla The focus of this International Journal of Molecular Sciences Special Issue is on molecular and cellular mechanisms diagnostics and therapies and diseases of aging Fifteen original research and review articles in this Special Issue provide important insights into how various genetic dietary and pharmacological interventions can affect certain longevity defining cellular and organismal processes to delay aging and postpone the onset of age related pathologies in evolutionarily diverse

organisms These articles outline the most important unanswered questions and directions for future research in the vibrant and rapidly evolving fields of mechanisms of biological aging aging associated diseases and aging delaying therapies

Aging and Age-related Diseases Michał Karasek,2006 Ageing has become a great problem for many countries Due to world wide life prolongation the number of people over 60 years old has grown rapidly into a ten percent piece of the world population The growing age of the world population raises many social economical and medical problems The proportion of people in the economically active age groups to those who are over 65 is constantly decreasing A major consequence of the increasing numbers of individuals in advanced age groups is increasing numbers of patients suffering from age related diseases The aim of this book is to present the basic data on human ageing as well as on age related diseases *Reviews on New Drug Targets in Age-Related Disorders* Paul C. Guest,2020-04-17 Aging is an inevitable part of life and is becoming a worldwide social economic and health problem This is mainly due to the fact that the increasing proportion of individuals in the advanced age category have a higher probability of developing age related disorders such as type II diabetes mellitus cardiovascular disorders sarcopenia and neurodegenerative conditions New therapeutic approaches are still needed to decrease or slow the effects of such diseases Advances in omic technologies such as genomics transcriptomics proteomics and metabolomics have significantly advanced our understanding of disease in multiple medical areas as the analysis of multiple molecular networks has simultaneously provided a more integrated view of disease pathways It is hoped that emerging hits from these analyses might be prioritized for further screening as potential novel drug targets for increasing the human healthspan in line with the lifespan In turn this will lead to new therapeutic strategies as well as drug development projects by the pharmaceutical industry This book presents a series of reviews describing studies that have resulted in identification of new potential drug targets for age related disorders Much of this information has come from omic comparisons of healthy and disease states or from testing the effects of new therapeutic approaches Authored by experts from around the globe each chapter is presented in the context of specific chronic diseases or therapeutic strategies This book is designed for researchers in the areas of aging and chronic disease as well as clinical scientists physicians and stakeholders in major drug companies **Encyclopedia of Sleep** ,2013-01-17 In a world of 24 hour media saturation sleep has become an increasingly fraught enterprise The award winning four volume Encyclopedia of Sleep Four Volume Set is the largest reference either online or in print on the subject of sleep Written to be useful for the novice and the established researcher and clinician Topic areas will include sleep across the life cycle and in other species sleep and women sleep and the elderly pediatric sleep sleep deprivation and loss sleep mechanisms sleep physiology and pathophysiology sleep disorders neurobiology chronobiology pharmacology and impact of other disorders on sleep Recognizing the many fields that are connected to sleep science the editorial team has been carefully chosen to do justice to this highly interdisciplinary field of study The steady growth of researchers and clinicians in the sleep field attests to the continued interest in the scientific study

of sleep and the management of patients with sleep disorders and anyone involved in this exciting field should find this work to be an invaluable reference 2013 PROSE Award winner for Multivolume Reference in Science from the Association of American Publishers Thoroughly interdisciplinary looks at sleep throughout the life cycle with exceptional coverage of basic sleep concepts the physiology of sleep as well as sleep disorders of all descriptions Excellent coverage of sleep and special populations covering the lifespan as well as gender and ethnic differences among others Chapters focusing on sleep disorders are grouped under the broad categories classified in the ICD 10 for clear organization so that the reader can effectively access the steps involved in diagnosing and treating these disorders Online version is linked both within the encyclopedia to related content and to external sources such as primary journal content so that users have easy access to more detailed information if needed
