Smarandache Manifolds Howard Iseri, 2002 *Combinatorial Geometry with Applications to Field Theory, Second Edition, graduate textbook in mathematics* Linfan Mao, 2011 *Smarandache Notions*, 2002 International Journal of Mathematical Combinatorics, Volume 1, 2007 Linfan Mao, The mathematical combinatorics is a subject that applying combinatorial notion to all mathematics and all sciences for understanding the reality of things in the universe The International J Mathematical Combinatorics is a fully refereed international journal sponsored by the MADIS of Chinese Academy of Sciences and published in USA quarterly which publishes original research papers and survey articles in all aspects of mathematical combinatorics Smarandache multi spaces Smarandache geometries non Euclidean geometry topology and their applications to other sciences

Mathematical Combinatorics: My Philosophy Promoted on Science Internationally Linfan Mao, 2024-01-01 Mathematical science is the human recognition on the evolution laws of things that we can understand with the principle of logical consistency by mathematics i.e. mathematical reality So is the mathematical reality equal to the reality of thing The answer is not because there always exists contradiction between things in the eyes of human which is only a local or conditional conclusion Such a situation enables us to extend the mathematics further by combinatorics for the reality of thing from the local reality and then to get a combinatorial reality of thing This is the combinatorial conjecture for mathematical science i.e. CC conjecture that I put forward in my postdoctoral report for Chinese Academy of Sciences in 2005 namely any mathematical science can be reconstructed from or made by combinatorialization After discovering its relation with Smarandache multi spaces it is then be applied to generalize mathematics over 1 dimensional topological graphs namely the mathematical combinatorics that I promoted on science internationally for more than 20 years This paper surveys how I proposed this conjecture from combinatorial topology how to use it for characterizing the non uniform groups or contradictory systems and furthermore why I introduce the continuity over GL as a mathematical element i.e. vectors in Banach space over topological graphs with operations and then how to apply it to generalize a few of important conclusions in functional analysis for providing the human recognition on the reality of things including the subdivision of substance into elementary particles or quarks in theoretical physics with a mathematical supporting

SCIENTIFIC ELEMENTS (International Book Series), Vol. I, Applications of Smarandache's Notions to Mathematics, Physics, and Other Sciences editors: Yuhua Fu, Linfan Mao, and Mihaly Bencze, 2007 The Scientific Elements is an international book series maybe with different subtitles This series is devoted to the applications of Smarandache's notions and to mathematical combinatorics These are two heartening mathematical theories for sciences and can be applied to many fields This book selects 12 papers for showing applications of Smarandache's notions such as those of Smarandache multi spaces Smarandache geometries Neutrosophy etc to classical mathematics theoretical and experimental physics logic cosmology Looking at these elementary applications we can experience their great potential for developing sciences 12

MATHEMATICAL REALITY Linfan MAO, A thing is complex and hybrid with other things sometimes Then what is the reality of a thing The reality of a thing is its state of existed exists or will exist in the world independent on the understanding of human beings which implies that the reality holds on by human beings maybe local or gradual not the reality of a thing Hence to hold on the reality of things is the main objective of science in the history of human development *Unfolding the Labyrinth: Open Problems in Physics, Mathematics, Astrophysics, and other areas of science* Florentin Smarandache,V. Christianto,2006-01-01 Throughout this book we discuss some open problems in various branches of science including mathematics theoretical physics astrophysics geophysics etc It is of our hope that some of the problems discussed in this book will find their place either in theoretical exploration or further experiments while some parts of these problems may be found useful for scholarly stimulation The present book is also intended for young physics and mathematics fellows who will perhaps find the unsolved problems described here are at least worth pondering If this book provides only a few highlights of plausible solutions it is merely to keep the fun of readers in discovering the answers by themselves Bon voyage
