Human Behavior Analysis: Sensing and Understanding Zhiwen Yu,Zhu Wang,2020-02-29 Over the last decade there has been a growing interest in human behavior analysis motivated by societal needs such as security natural interfaces affective computing and assisted living However the accurate and non invasive detection and recognition of human behavior remain major challenges and the focus of many research efforts Traditionally in order to identify human behavior it is first necessary to continuously collect the readings of physical sensing devices e.g camera GPS and RFID which can be worn on human bodies attached to objects or deployed in the environment Afterwards using recognition algorithms or classification models the behavior types can be identified so as to facilitate advanced applications Although such traditional approaches deliver satisfactory performance and are still widely used most of them are intrusive and require specific sensing devices raising issues such as privacy and deployment costs In this book we will present our latest findings on non invasive sensing and understanding of human behavior Specifically this book differs from existing literature in the following senses Firstly we focus on approaches that are based on non invasive sensing technologies including both sensor based and device free variants Secondly while most existing studies examine individual behaviors we will systematically elaborate on how to understand human behaviors of various granularities including not only individual level but also group level and community level behaviors Lastly we will discuss the most important scientific problems and open issues involved in human behavior analysis
