**Smoothed Particle Hydrodynamics** Tanmayee Gupte, 2018 Smoothed particle hydrodynamics SPH is a meshfree particle method based on a Lagrangian formulation which has been widely applied to different areas in astrophysics involving complicated fluid dynamical processes For the first part of this project we have expanded an existing smoothed particle hydrodynamic code StarCrash We have added different time integration methods and used them to study the code's overall ability to conserve energy In the second part we have evaluated the StarCrash code's ability to use different numerical treatments to perform shock tube simulations via Sod's shock tube test We have used different evolution schemes involving either the energy or the entropy of the system along with different artificial viscosity formulations and compared the results from the numerical simulations with the analytical solution
