Guest, 2020-04-17 Aging is an inevitable part of life and is becoming a worldwide social economic and health problem This is mainly due to the fact that the increasing proportion of individuals in the advanced age category have a higher probability of developing age related disorders such as type II diabetes mellitus cardiovascular disorders sarcopenia and neurodegenerative conditions. New therapeutic approaches are still needed to decrease or slow the effects of such diseases Advances in omic technologies such as genomics transcriptomics proteomics and metabolomics have significantly advanced our understanding of disease in multiple medical areas as the analysis of multiple molecular networks has simultaneously provided a more integrated view of disease pathways It is hoped that emerging hits from these analyses might be prioritized for further screening as potential novel drug targets for increasing the human healthspan in line with the lifespan In turn this will lead to new therapeutic strategies as well as drug
