Treatment of the diseases of the eye, by means of prussic acid vapour, and other medicinal agents Alexander Turnbull, 2021-05-19 In his seminal work *Treatment of the Diseases of the Eye by Means of Prussic Acid Vapour and Other Medicinal Agents*, Alexander Turnbull presents a revolutionary approach to ophthalmic treatment in the 19th century. This meticulously researched volume merges clinical observations with innovative therapeutic techniques, highlighting the use of prussic acid vapour alongside various medicinal agents. Turnbull's clear and scholarly prose reflects the prevailing medical ethos of the time, underpinned by burgeoning advances in pharmacology and a deepening understanding of human anatomy, making it a significant contribution to medical literature and the continuing evolution of ocular medicine. Turnbull, an esteemed figure in medical circles, was profoundly influenced by the limitations of conventional treatments available during his practice. His extensive studies in both Europe and America informed his investigation into less explored therapeutic modalities, particularly those involving anesthetic and toxic pharmacology. This book juxtaposes Turnbull's clinical experiences against the backdrop of contemporary medical debates, showcasing his commitment to innovative patient care and his willingness to challenge established norms. For anyone interested in the evolution of medical practices, especially in the field of ophthalmology, Turnbull's work is indispensable. It not only provides insight into historical treatment modalities but also invites readers to appreciate the delicate balance between scientific inquiry and patient safety. This book is a critical

Cosmology and the Scientific Self in the Nineteenth Century Howard Carlton, 2022-08-03. This book argues that while the historiography of the development of scientific ideas has for some time acknowledged the important influences of socio-cultural and material contexts, the significant impact of traumatic events, life-threatening illnesses, and other psychotropic stimuli on the development of scientific thought may not have been fully recognised. Howard Carlton examines the available primary sources which provide insight into the lives of a number of nineteenth-century astronomers, theologians, and physicists to study the complex interactions within their biocultural brain-body systems which drove parallel changes of perspective in theology, metaphysics, and cosmology. In doing so, he also explores three topics of great scientific interest during this period: the question of the possible existence of life on other planets, the deployment of the nebular hypothesis as a theory of cosmogony, and the religiously charged debates about the ages of the earth and sun. From this body of evidence, we gain a greater understanding of the underlying phenomena which actuated intellectual developments in the past and which are still relevant to today's knowledge-making processes.

A Slight Trick of the Mind Mitch Cullin, 1907. The basis for the Major Motion Picture *Mr Holmes* starring Ian McKellen and Laura Linney and directed by Bill Condon. It is 1947 and the long-retired Sherlock Holmes, now 93, lives in a remote Sussex farmhouse with his housekeeper and her young son. He tends to his bees, writes in his journal, and grapples with the diminishing powers of his mind. But in the twilight of his life, as people continue to look to him for answers, Holmes revisits a case that may provide him with answers of his own to questions he didn't even know he was asking about life, about love, and about the limits of the mind's ability to know. A novel of exceptional grace and literary sensitivity, *A Slight Trick of the Mind* is a brilliant imagining of our greatest fictional detective and a stunning inquiry into the mysteries of human connection.
