Economy United States. Congress. House. Committee on Interstate and Foreign Commerce. Subcommittee on Public Health and Environment, 1974 HC 470 - Building public engagement: Options for developing select committee outreach Great Britain. Parliament. House of Commons. Liaison Committee, 2015 In 2012 the House of Commons introduced a new core task for all select committees that focused on public engagement as a distinctive and explicit factor of their work This report focuses on how the select committees have responded to the new core task Three core conclusions emerged a there has been a significant shift within the select committee system to taking public engagement seriously and this is reflected in many examples of innovation b this shift however has not been systematic and levels of public engagement vary significantly from committee to committee and c a more vibrant and systematic approach to public engagement is urgently needed but this will require increased resources a deeper appreciation of the distinctive contribution that select committees can make and a deeper cultural change at Westminster This report therefore details innovations in relation to the use of social media the structure of inquiries and innovative outreach Public engagement has not yet been fully embedded into the culture of parliament but there is evidence of significant cracks and wedges that can now be built upon and extended during the 2015-20 Parliament Clearly the focus of the committee and the topic of the inquiry will have some bearing on the approach to engagement adopted but a more expansive and ambitious approach across the board is to be encouraged This report leads to a ten point set of inter related recommendations but they can all be connected in the sense that the existing social research demonstrates a clear desire on the part of the public to do politics differently

Parliament. House of Commons. Treasury Committee, 2014 One of the most significant consequences of Co op Bank s near collapse from a public policy perspective was the collapse of Lloyds Banking Group s planned divestment under Project Verde Co op Bank s withdrawal forced Lloyds to resort to its fallback option of an Initial Public Offering The result is a new bank TSB which not having an existing banking presence of its own consists solely of the business divested by Lloyds Accordingly it has a personal current account market share not of 7 per cent but of 4 2 per cent There is a risk that a bank of this size might struggle to grow significantly and to act as a true challenger in the market Had Co op Bank s resulting capital shortfall been uncovered earlier it is likely that the bank would not have progressed so far with Verde As it was the rapid and late emergence of the capital problem led to Co op s withdrawal from the Verde process at a relatively late stage The Committee recommends that the FRC investigation and the independent inquiry into the events at Co op Bank consider the role of KPMG and the FSA in relation to the late emergence of loan impairment and IT losses On the basis of these findings the independent inquiry into the events at Co op Bank should also form a view on whether Co op s Verde bid could or should have been halted sooner While it may not have been fully transparent from the start that Co op Bank s bid was doomed to failure it was beset by problems from an early stage But it was not these problems that killed the deal it was the capital shortfall that emerged only late in the day It is important from every angle to determine why the capital shortfall was not uncovered earlier *New Motor Vehicle Emission Standards and Fuel Economy, Hearings Before the Subcommittee on*

Weaving, 2012-12-06 Sir Diarmuid Downs CBE FEng FRS Engineering is about designing and making marketable artefacts The element of design is what principally distinguishes engineering from science The engineer is a creator He brings together knowledge and experience from a variety of sources to serve his ends producing goods of value to the individual and to the community An important source of information on which the engineer draws is the work of the scientist or the scientifically minded engineer The pure scientist is concerned with knowledge for its own sake and receives his greatest satisfaction if his experimental observations fit into an aesthetically satisfying theory The applied scientist or engineer is also concerned with theory but as a means to an end He tries to devise a theory which will encompass the known experimental facts both because an all embracing theory somehow serves as an extra validation of the facts and because the theory provides us with new leads to further fruitful experimental investigation I have laboured these perhaps rather obvious points because they are well exemplified in this present book The first internal combustion engines produced just over one hundred years ago were very simple the design being based on very limited experimental information The current engines are extremely complex and while the basic design of cylinder piston connecting rod and crankshaft has changed but little the overall performance in respect of specific power fuel economy pollution noise and cost has been absolutely transformed **De StripDatabank** Peter Bonte, 2004 *Unburned Hydrocarbon Emission Mechanisms in Small Engines* Victor M.
