Austin,P. Brimblecombe,W.T. Sturges,2002-10-31 Acid rain photochemistry long range transport of pollutants greenhouse gas emissions and aerosols have dominated tropospheric air pollution for the last 30 years of the 20th century At the start of the 21st century acid rain is subject to planned improvement in Europe and North America but is still a growing problem in Asia Tropospheric ozone is understood much better but the problem is still with us and desirable levels are difficult to achieve over continental Europe The heterogeneous chemistry that is responsible for ozone depletion in the stratosphere is now reasonably clear but there is on going interest in the sources and sinks of CFC chlorofluorocarbon replacements in the troposphere There is also increasing interest in indoor air quality and the origin and health implications of atmospheric particles Perhaps most important on a global perspective intensive research has not yet determined the relationship between greenhouse gases aerosols and surface temperature The

climactic implications of these are now more urgent than ever This book the first in the Developments in Environmental Science series consists of a collection of authoritative reviews and essays on the science and application of air pollution research at the start of this new century *Enforcing Pollution Control Laws* Clifford S. Russell, Winston Harrington, William J. Vaughn, 2013-10-18 Economic models are used to show the extent of the difficulties involved in monitoring and enforcing pollution control laws on a continual basis The authors make several recommendations for policy change They also show that high rates of compliance can be achieved within tight budget constraints Originally published in 1986 **Introduction to Environmental Forensics** Brian L.
