Designing Small Parks Ann Forsyth, Laura Musacchio, 2005-10-24 Designing Small Parks A Manual for Addressing Social and Ecological Concerns provides guidelines for building better parks by integrating design criteria with current social and natural science research Small parks are too often relegated to being the step child of municipal and metropolitan open space systems because of assumptions that their small size and isolation limits their recreational capacity and makes them ecologically less valuable than large city and county parks This manual is arranged around twelve topics that represent key questions contradictions or tensions in the design of small parks Topics cover fundamental issues for urban parks natural systems and human aspects Also included are useful case studies with alternative design solutions using three different approaches for integrating research findings into small urban park design

Shallow Subterranean Habitats David C. Culver, Tanja Pipan, 2014-06-05 Shallow subterranean habitats SSHs are areas of habitable space that are less than 10 m in depth from the surface These range from large areas such as shallow caves and lava tubes to tiny areas such as cracks in ceilings or spaces in soil Whilst being very different in many ways they are often bound together by shared characteristics of the habitats and their faunas and their study can help us to understand subterranean habitats in general This book concentrates on the more typical SSHs of intermediate size seepage springs spaces between rocks cracks in lava etc describing the habitats their fauna and the ecological and evolutionary questions posed Similarities and differences between the habitats are considered and discussed in a broader ecological and evolutionary context The book is mainly aimed at students and researchers in the field of subterranean biology but will also be of interest to a wider range of ecologists evolutionary biologists freshwater biologists and conservationists There will also be an audience of environmental professionals

The Biology of Temporary Waters D. Dudley Williams, 2006 The Biology of Temporary Waters brings together diverse global literature on pure and applied aspects of temporary waters and their biotas It examines their roles in both natural and human environments and seeks common evolutionary themes

Encyclopedia of Inland Waters, 2009-01-13 Inland aquatic habitats occur world wide at all scales from marshes swamps and temporary puddles to ponds lakes and inland seas from streams and creeks to rolling rivers Vital for biological diversity ecosystem function and as resources for human life commerce and leisure inland waters are a vital component of life on Earth The Encyclopedia of Inland Waters describes and explains all the basic features of the subject from water chemistry and physics to the biology of aquatic creatures and the complex function and balance of aquatic ecosystems of varying size and complexity Used and abused as an essential resource it is vital that we understand and manage them as much as we appreciate and enjoy them This extraordinary reference brings together the very best research to provide the basic and advanced information necessary

for scientists to understand these ecosystems and for water resource managers and consultants to manage and protect them for future generations Encyclopedic reference to Limnology a key core subject in ecology taught as a specialist course in universities Over 240 topic related articles cover the field Gene Likens is a renowned limnologist and conservationist Emeritus Director of the Institute of Ecosystems Research elected member of the American Philosophical Society and recipient of the 2001 National Medal of Science Subject Section Editors and authors include the very best research workers in the field

East Contra Costa County Habitat Conservation Plan and Natural Community Conservation Plan, 2006 **Fundamentals of Biogeography** Richard J. Huggett, 2004 Fundamentals of Biogeography presents an appealing introduction for students and all those interested in gaining a deeper understanding of key topics and debates within the fields of biogeography ecology and the environment Revealing how life has been and is adapting to its biological and physical surroundings Huggett stresses the role of ecological historical and human factors in fashioning animal and plant distributions and explores how biogeography can inform conservation practice Jacket **Reno General Management Plan**, 1982

I-270/US 15 Multi Modal Corridor Study, Montgomery and Frederick Counties, 2002 *Interchanges of Insects between Agricultural and Surrounding Landscapes* B.S. Ekbom, Michael E. Irwin, Y. Robert, 2013-04-17 The chapters in this book were developed from some of the lectures presented at a symposium at the XX International Congress of Entomology held in Florence Italy in August 1996 The purpose of the symposium was to discuss the impact of evolving modern agricultural landscapes on the insect species of both economic and ecological importance that utilize that habitat Agricultural policy to some extent influences the choices that farmers make and thereby the shape of the agricultural landscape In order to move toward more sustainable agro ecosystems future policy makers will have to consider the history of land use consumer demands for both environmentally sound and affordable products and the conservation of biological diversity I would hope the information contained in this book will help stimulate discussion about the consequences of policy decisions on our agricultural landscapes and their insect inhabitants I thank all the speakers from the symposium and in particular those that have been able to contribute chapters to this book There have been many delays most due to circumstances beyond anyone's control I would like to express my appreciation to Gloria Verhey and Patrick Dumont for taking care of the book in these final months CHAPTER I INTERCHANGES OF INSECTS BETWEEN AGRICULTURAL AND SURROUNDING LANDSCAPES BARBARA EKBOM Department of Entomology Swedish University of Agricultural Sciences Uppsala Sweden 1

Maintaining Contact Patrick J. O. Miller, 2000 This thesis describes the structure and use of acoustic signals produced by resident killer whales off Vancouver Island Calling of isolated subpods differed similarly but more subtly than across pods suggesting that pod specific calling arises as a consequence of drift between subgroups as they gradually separate into different pods A towed array beamforming system was developed to identify vocalizing killer whales concurrent with focal behavioral observations A sample of 140 calls was recorded from three members of one matrilineal subgroup showing they

shared at least four call types suggesting matrilineal group members use calls in a similar fashion Source levels measured using two beamforming arrays towed in series were combined with a model of sound propagation and perception to estimate the maximum range of detectability of each sound in quiet conditions The estimated range of 4.5 to 26.2 km suggests killer whales can maintain acoustic contact over long distances The frequency structure of 263 calls recorded directly in front and behind animals depended on signaler orientation with high frequencies attenuated when the signaler was oriented away This directionality pattern appears to provide a simple and reliable cue of signaler direction of movement helping killer whales regulate their spacing relative to each other

American Snakes Sean P. Graham, 2018-02 125 million years ago on the floodplains of North America a burrowing lizard started down the long evolutionary path of shedding its limbs The 60 plus species of snakes found in Sean P Graham's *American Snakes* have this ancestral journey to thank for their ubiquity diversity and beauty Although many people fear them snakes are as much a part of America's rich natural heritage as redwoods bald eagles and grizzly bears Neither a typical field guide nor an exhaustive reference *American Snakes* is instead a fascinating study of the suborder Serpentes Brimming with intriguing and unusual stories of hognose snakes that roll over and play dead blindsnakes with tiny vestigial lungs rainbow hued dipsadines and wave surfing sea snakes the text is interspersed with scores of gorgeous full color images of snakes from the scary to the sublime

Landscape Ecological Analysis Jeffrey M. Klopatek, Robert H. Gardner, 2012-12-06 Studies in landscape ecology focus on the effect of heterogeneity on ecosystem structure and function Vigorous growth in the field has included the development of methods and results that can be applied to an impressive range of environmental issues The purpose of this book is to provide the reader with a current perspective on this rapidly developing science This book features contributions by internationally renowned experts in the field that address a broad spectrum of political theoretical and applied aspects of the subject Chapters describe a number of methods and models that are used at landscape and regional scales within the context of ecosystem management to assess changes in biodiversity and to evaluate sustainable landscape planning for cultural as well as natural settings Also included are instructional models to assist in teaching

Methods of Environmental Impact Assessment Peter Morris, Riki Therivel, 2001 Written by experts this text deals with how environmental impact assessment should be carried out for specific environmental components such as air and water □□□ □□, 2003 *The Evolutionary Ecology Of Plants* Jane H Bock, Yan B Linhart, G L Stebbins, Charles E Turner, 2019-06-25 This book presents a broad view of contemporary research in evolutionary plant ecology It illustrates the broad spectrum of life history stages which affect plant reproductive success in some fashion *Ecosystem Service Potentials and Their Indicators in Postglacial Landscapes* Andrzej Affek, Marek Degórski, Jacek Wolski, Jerzy Solon, Anna Kowalska, Ewa Roo-Zielinska, Bozenna Grabinska, Boguslawa Kruczkowska, 2019-10-30 Ecosystem Service Potentials and Their Indicators in Postglacial Landscapes Assessment and Mapping provides valuable guidance for anyone involved with ecosystem service potential monitoring use and management from landscape ecologists and environmental managers to policymakers and environmental economists The book highlights effective measurement tools for evaluating the overall potential of ecosystem services from multiple perspectives Beginning with an introduction to ecosystem services and the theoretical assumptions and objectives associated with their assessment the book goes on to outline interdisciplinary methods of evaluation and analysis that are fully supported and illustrated throughout using an insightful case study focused on Wigry National Park A range of different spatial reference units are also discussed followed by chapters on both analytical and synthetic approaches to identifying service supply potential In addition the use of services and the impact of these uses on the assessment of potential is included along with a discussion of the future shape of ecosystem service assessment Outlines a transdisciplinary holistic approach to assessing the overall potential of ecosystems and landscapes to support

different ecosystem services Proposes a range of direct indirect simple and complex measurement indicators for multifaceted estimation and mapping Presents tools and guidelines to help shape effective decision making processes in nature conservation and environmental planning

The Ecology of Temporary Waters D. Dudley Williams, 2012-12-06 The primary role of this book is to introduce the reader to and hopefully stimulate interest in the ecology of temporary aquatic habitats The book assumes that the reader will have already some general knowledge of ecology but this is not essential Temporary waters exhibit amplitudes in both physical and chemical parameters which are much greater than those found in most waterbodies The organisms that live in these types of habitats have therefore to be very well adapted to these conditions if they are to survive Survival depends largely on exceptional physiological tolerance or effective immigration and emigration abilities Examples of such adaptations are given throughout the book and it is hoped that these will aid the reader in gaining an insight into the structure and function of plant and animal communities of these unusual habitats The final chapter suggests field and laboratory projects that should be useful to students in school and university studies
