Newton had far exceeded all previous works and revolutionised scientific thinking The FLAME TREE Foundations series features core publications which together have shaped the cultural landscape of the modern world with cutting edge research distilled into pocket guides designed to be both accessible and informative

The Principia: Mathematical Principles of Natural Philosophy Isaac Newton, 2016-09-15 Philosophi Naturalis Principia Mathematica Latin Mathematical Principles of Natural Philosophy generally called The Principia is a work in three books by Isaac Newton Initially published 5 July 1687 The Principia states Newton's laws of motion forming the foundation of classical mechanics Newton's law of universal gravitation and a derivation of Kepler's laws of planetary motion which Kepler first obtained empirically The Principia is generally regarded as one of the most important works in the history of science
