Sleep And Dreaming Origins Nature And Functions:

Sleep & Dreaming D. Cohen, 2013-10-22 Sleep and dreaming are manifestations in higher organisms of a fundamental circadian rhythm of inactivity activity During the past thirty years research has provided a great deal of new information about the phenomenon and phenomenology of sleep and the relationship between sleep and wakefulness This book aims to describe organise and interpret some of this new knowledge in order to stimulate a greater appreciation of the role of sleep and dreaming in human adaptation The study of sleep and dreaming provides a very special perspective on human functioning It stands in direct contrast to more traditional paradigms utilised in psychology that place the locus of explanation of human behaviour in the external environment

The Neuropsychology of Sleep and Dreaming John S. Antrobus, Mario Bertini, 2013-01-11 This volume describes how the conceptual and technical sophistication of contemporary cognitive and neuroscientific fields has enhanced the neurocognitive understanding of dreaming sleep Because it is the only naturally occurring state in which the active brain produces elaborate cognitive processes in the absence of sensory input the study of dreaming offers a unique cognitive and neurophysiological view of the production of higher cognitive processes The theory and research included is driven by the search for the most direct relationships linking the neurophysiological characteristics of sleepers to their concurrent cognitive experiences The search is organized around three sets of theoretical models and the three classes of neurocognitive relationships upon which they are based The contributions to this volume demonstrate that the field has begun to move in new directions opened up by the rapid advances in contemporary cognitive science neuropsychology and neurophysiology

Sleep and Dreaming: Origins, Nature and Functions David B. Cohen, 1986 **Sleep and Dreams** Jayne Gackenbach, 2017-09-07 Originally published in 1986 the emphasis in this book is on dreaming rather than sleeping This reflected the recent emergence of interest in dreaming among professionals in the general public and across disciplines at the time Each chapter offers a review of its area with pertinent references Selected references are annotated The annotated references represent the cutting edge of the area under review or are classical historically important pieces or studies that represent a key turning point Therefore the number of annotations varies from chapter to chapter This book gives the reader a basic grounding in what we know about the sleep state and then details sleep mentation or dreaming Although this book is not totally comprehensive it will give the reader a good look at the basic sleep phenomena and a more detailed look at contemporary work on dreaming

Animal Minds Donald R. Griffin, 2024-05-31 In *Animal Minds* Donald R Griffin takes us on a guided tour of the recent explosion of scientific research on animal mentality Are animals consciously aware of anything or are they merely living machines incapable of conscious thoughts or emotional feelings How can we tell Such questions have long fascinated Griffin who has been a pioneer at the forefront of research in animal cognition for decades and is recognized as one of the leading behavioral ecologists of the twentieth century With this new edition of his classic book which he has completely revised and updated Griffin moves beyond considerations of animal

cognition to argue that scientists can and should investigate questions of animal consciousness Using examples from studies of species ranging from chimpanzees and dolphins to birds and honeybees he demonstrates how communication among animals can serve as a window into what animals think and feel just as human speech and nonverbal communication tell us most of what we know about the thoughts and feelings of other people Even when they don't communicate about it animals respond with sometimes surprising versatility to new situations for which neither their genes nor their previous experiences have prepared them and Griffin discusses what these behaviors can tell us about animal minds He also reviews the latest research in cognitive neuroscience which has revealed startling similarities in the neural mechanisms underlying brain functioning in both humans and other animals Finally in four chapters greatly expanded for this edition Griffin considers the latest scientific research on animal consciousness pro and con and explores its profound philosophical and ethical implications

The Evolution of Human Sociability Ron Vannelli, 2015-09-25 How do desires and fears motivate human sociability What effect do these motivators have on reproductive social and political behaviour And crucially how might we understand them separate from preconceived notions of design or higher morality Taking these questions as a focus this book examines human evolution with the emphasis on sexual selection and the evolution of a number of human psychological processes Exploring evolutionary sexual and maturational processes along with primate fossil and geological evidence Vannelli argues that human nature can be conceptualised as species typical desires and fears derived from sexual selection during human evolution and that these are major motivators of behaviour Presenting additional evidence from the anthropology of band societies along with material from group behaviour Vannelli highlights the importance of pair bonding friendship alliance behaviour vengeance seeking and interpersonal politics in social behaviour providing a unique interdisciplinary framework for understanding human nature and the evolution of human sociability

Sex and Behavior McGill, 2013-06-29 Discussion of the precise nature and position of boundaries between disciplines is nearly always counterproductive the need is usually to cross them not to emphasize them And any such discussion of the distinction between ethology and comparative psychology would today seem patently absurd While there may be differences in outlook no boundaries exist But when Frank Beach started in research that was not the case Comparative psychology flourished in the United States whereas ethology was unknown Beach started as a comparative psychologist and has always called himself either that or a behavioral endocrinologist Yet among the comparative psychologists of his generation he has had closer links with the initially European ethologists than almost any other He was indeed one of the editors of the first volume of Behaviour That this

should have been so is not surprising once one knows that his Ph D thesis concerned The Neural Basis for Innate Behavior that he used to sleep in the laboratory so that he could watch mother rats giving birth and that in 1935 he was using model young to analyze maternal behavior Furthermore for nine years he worked in the American Museum of Natural History in a department first named Experimental Biology and later when Beach had saved it from extinction and become its chairman the Department of Animal Behavior It was in 1938 during Frank s time at the American Museum that he was first introduced to Niko Tinbergen by Ernst Mayr

The Neurocognitive Theory of Dreaming G. William Domhoff,2022-10-04 A comprehensive neurocognitive theory of dreaming based on the theories methodologies and findings of cognitive neuroscience and the psychological sciences G William Domhoff s neurocognitive theory of dreaming is the only theory of dreaming that makes full use of the new neuroimaging findings on all forms of spontaneous thought and shows how well they explain the results of rigorous quantitative studies of dream content Domhoff identifies five separate issues neural substrates cognitive processes the psychological meaning of dream content evolutionarily adaptive functions and historically invented cultural uses and then explores how they are intertwined He also discusses the degree to which there is symbolism in dreams the development of dreaming in children and the relative frequency of emotions in the dreams of children and adults During dreaming the neural substrates that support waking sensory input task oriented thinking and movement are

relatively deactivated Domhoff presents the conditions that have to be fulfilled before dreaming can occur spontaneously He describes the specific cognitive processes supported by the neural substrate of dreaming and then looks at dream reports of research participants The why of dreaming he says may be the most counterintuitive outcome of empirical dream research Though the question is usually framed in terms of adaptation there is no positive evidence for an adaptive theory of dreaming Research by anthropologists historians and comparative religion scholars however suggests that dreaming has psychological and cultural uses with the most important of these found in religious ceremonies and healing practices Finally he offers suggestions for how future dream studies might take advantage of new technologies including smart phones **Dream**

Science J. F. Pagel, 2014-02-05 Dreaming is the cognitive state uniquely experienced by humans and integral to our creativity the survival characteristic that allows for the rapid change and innovation that defines our species and provides the basis for our art philosophy science and humanity Yet there is little empiric or scientific evidence supporting the generally accepted dream based theories of neuroconsciousness Dream Science examines the cognitive science of dreaming and offers an evidence based view of the phenomenon Today such evidence based breakthroughs in the field of dream science are altering our understanding of consciousness Different forms of dreaming consciousness occur throughout sleep and dreamlike states extend into wake Each dream state is developed on a framework of memories emotions representational images and electrophysiology amenable to studies utilizing emerging and evolving technology Dream Science discusses basic insights into the scientific study of dreaming including the limits to traditional Freudian based dream theory and the more modern evidence based science It also includes coverage of the processes of memory and parasomnias the sleep disturbance diagnoses related to dreaming This comprehensive book is a scientific exploration of the mind brain interface and a look into the future of dream science Provides a more evidence based approach than any other work on the market Single source of integrated information on all aspects of dream science makes this a critical time saving reference for researchers and clinicians Authored by one of the leaders in the field of dream research **Adaptive Capabilities of the Nervous System**
