Social Systems And Learning Systems:

Social Systems and Learning Systems A.F.G. Hanken, H.A. Reuver, 2012-12-06 In today's social and behavioral sciences the complexity of many problems requires the development of a number of highly specialized disciplines. However, the cost of such development is the obscuring of the relationships between these disciplines. This dilemma calls for a mixed strategy that combines the advantages of specialization with those of a unified viewpoint. The purpose of this book is to provide the connective tissue that is needed to obtain an overall view. The principles of general system theory naturally lead to a framework that includes many known models and content areas. Our intention is to strike a balance between generality and plain usefulness. The first part of this book introduces a social system as a network of interacting decision makers. This general framework allows a classification of a number of more specific structures which include autocratic and democratic systems, systems with collective and individual decision making, and systems with and without coalitions. In the second part various psychological schools are seen as specific instances of a general paradigm which is consequently a point of departure for a taxonomy of learning systems. For a full understanding of this matter we recommend a careful study of the first four chapters as an introduction to the concepts elaborated in the second part of the book. ix PREFACE x Though the subject matter has a formal background it does not require a mathematical knowledge in depth. Familiarity with elementary probability theory and linear algebra is enough.

Social Learning Systems and Communities of Practice Chris Blackmore, 2010-06-01 *Social Learning Systems and Communities of Practice* is a collection of classical and contemporary writing associated with learning and systemic change in contexts ranging from cities to rural development to education to nursing to water management to public policy. It is likely to be of interest to anyone trying to understand how to think systemically and to act and interact effectively in situations experienced as complex, messy, and changing. While mainly concerned with professional praxis where theory and practice inform each other, there is much here that can apply at a personal level. This book offers conceptual tools and suggestions for new ways of being and acting in the world in relation to each other that arise from both old and new understandings of communities, learning, and systems. Starting with twentieth-century insights into social learning, learning systems, and appreciative systems from Donald Schön and Sir Geoffrey Vickers, the book goes on to consider the contemporary traditions of critical social learning systems and communities of practice pioneered by Richard Bawden and Etienne Wenger and their colleagues. A synthesis of the ideas raised, written by the editor, concludes this reader. The theory and practice of social learning systems and communities of practice appear to have much to offer in influencing and managing systemic change for a better world.

Social Systems and Design Gary S. Metcalf, 2014-07-08 We live in the worlds that we help to create every day. Every activity either supports an existing system or effects some change, however small. But is it possible to consciously create the worlds in which we want to live? This volume brings together systems theorists and practitioners who have worked on that question for decades. It explores connections

between design and systems ideas to explain why some efforts have been more successful than others and what is needed if we are to move forward It offers reflections on early and large scale attempts at impacting societal systems as well as proposals for taking those ideas into the future Examples date back to the Club of Rome in the 1960s and look forward to the creation of ecologically sustainable systems in the future They address the need for collaboration and inclusion in settings from communities to corporations And while theories are presented as support for the examples they are explained in practical ways meant to be accessible both to students and to general readers

Models and Theories in Social Systems

Resilience in Social-Ecological Systems Marianne E. Krasny,Cecilia Lundholm,Ryan Plummer,2013-10-18 Resilience thinking challenges us to reconsider the meaning of sustainability in a world that must constantly adapt in the face of gradual and at times catastrophic change This volume further asks environmental education and resource management scholars to consider the relationship of environmental learning and behaviours to attributes of resilient social ecological systems attributes such as ecosystem services innovative governance structures biological and cultural diversity and social capital Similar to current approaches to environmental education and education for sustainable development resilience scholarship integrates social and ecological perspectives The authors of Resilience in social ecological systems the role of learning and education present a wealth of perspectives integrating theory with reviews of empirical studies in natural resource management and in youth adult and higher education The authors explore the role of education and learning in helping social ecological systems as they respond to change through adaptation and transformation This book also serves to integrate a growing literature on resilience and social learning in natural resources management with research in environmental education and education for sustainable development This book was originally published as a special issue of Environmental Education Research

The Dynamics and Social Outcomes of Education Systems J. Janmaat,M. Duru-Bellat,P. Méhaut,A. Green,2013-08-27 Some scholars argue that education systems across the western world are becoming increasingly similar due to the influence of transnational discourses and organizations Others believe that education is the panacea for all problems of social cohesion After all aren t the well educated usually more tolerant civically engaged and trusting than the poorly educated This book critically examines both claims It finds that western countries still differ markedly on key aspects of their education systems and that these differences reflect distinct political traditions and different responses to a set of competing normative and political principles The findings further suggest that raising the average education level is unlikely to be an effective strategy for promoting social cohesion Instead more promising are policies targeting the opposite ends of the lifelong learning continuum universalizing pre school education and care and promoting adult education with a pronounced second chance character

The Performance of Social Systems Francisco Parra-Luna,2012-12-06 It can be said that the concept of performance of social systems is one of the most relevant since all social systems from the family through the enterprise to the Nation state are only interesting in obtaining as high a performance as possible The difficulties encountered when dealing with the concept of performance have been recognized

and few books until now ventured to tackle the task mainly because of the following three big problems the lack of a theoretical operational model the lack of valid data and the lack of computer facilities Today these obstacles have been overcome and this is the first book based on different systemic perspectives value theory modelling observation and quantification which offers the possibility of defining and working out the concept The book should be of great interest to sociologists political scientists economists organizational theorists managers and politicians
