Threshold Concepts within the Disciplines ,2008-01-01 Threshold Concepts within the Disciplines brings together leading writers from various disciplines and national contexts in an important and readable volume for all those concerned with teaching and learning in higher education The foundational principle of threshold concepts is that there are in each discipline conceptual gateways or portals that must be negotiated to arrive at important new understandings In crossing the portal transformation occurs both in knowledge and subjectivity Such transformation involves troublesome knowledge a key concern for contributors to this book who identify threshold concepts in their own fields and suggest how to deal with them Part One extends and enhances the threshold concept framework containing chapters that articulate its qualities its links to other social theories of learning and other traditions in educational research Part Two encompasses the disciplinary heart of the book with contributions from a diversity of areas including computing engineering biology design modern languages education and economics In the many empirical case studies educators show how they have used the threshold concept framework to inform and evaluate their teaching contexts Other chapters emphasise the equally important being and becoming dimension of learning Part Three suggests pedagogic directions for those at the centre of the education project with contributions focusing on the socialisation of academics and their continuing quest to be effective teachers The book will be of interest to disciplinary teachers educational researchers and educational developers It also is of relevance to issues in quality assurance and professional accreditation Test of Understanding in College Economics William B. Walstad,2007

planning to class discussions grading and teacher student interactions outside the classroom The book s down to earth accessible style makes it appropriate for new teachers in all fields Instructors in the humanities the social sciences and the natural sciences will all welcome its invaluable tips for successful teaching and learning Valuing Us All April Laskey Aerni, KimMarie McGoldrick, 1999-12-15 Argues for making economics classrooms more inclusive through changes in course content and teaching methods **Creating a Curriculum for Adolescent Youth** National Education Association of the United States.
