Rice-Evans, 1991-12-26 Free radical species are generally short lived due to their high reactivity and thus direct measurement and identification are often impossible ESR is the only technique which has the potential for direct detection of radicals but in biological systems even these must be trapped by a spin trapping agent Thus most investigations involve recognition of indicators of the presence of radicals in vivo or FOOTPRINTS of radical mediated damage Techniques in Free Radical Research assembles and critically assesses the most relevant and reliable experimental approaches used towards the measurement of radicals and radical mediated damage in chemical systems in cells and in tissues under the following six headings a Footprints of DNA damage b Footprints of protein damage c Footprints of lipid peroxidation d Footprints of antioxidant consumption e Footprints via indirect radical assays and f Footprints via the availability of transition metal complexes Laboratory Techniques in Biochemistry and Molecular Biology Roy Hunter Burdon, P. J. H. Clark, R. E. Hester, 1996-07-10 About this book In recent years a number of different spectroscopic techniques have been applied to the study of a wide range of biomedical topics Biomedical investigations in fields as diverse as eye lens research the study of cardiovascular and inflammatory diseases and the study of oxidative stress in disease can now be carried out by spectroscopic means The nine chapters in Biomedical Applications of

Spectroscopy present an authoritative overview of the current status of the field with each chapter written by acknowledged experts A wide range of techniques is considered including optical microspectroscopy Raman spectroscopy FTIR spectroscopy NMR and EPR spectroscopy and mass spectrometry This highly topical volume will stimulate interest in this expanding field and point the way towards future directions in research The major objectives of this established series are to integrate theory and practice and to bring together different branches of both academic and industrial research through the presentation of critical review articles in fundamental and applied spectroscopy The policy of the editors is to commission authoritative reviews by acknowledged leaders in the various fields of spectroscopy Thus each volume presents a carefully composed picture of the state of the art for a particular area For each volume the subject matter is presented in a manner which is Comprehensible to the non expert for whom the series will continue to provide a valuable introduction and a timely overview of topics in spectroscopy which are of current interest and importance At the same time the involved expert will find much to engage his or her attention The series is of interest to research scientists and technologists to teachers and both graduate and undergraduate students
