Sites Architecture 26:

Sites Unseen William A. Gleason, 2011 *Sites Unseen* examines the complex intertwining of race and architecture in nineteenth and early twentieth century American culture the period not only in which American architecture came of age professionally in the U S but also in which ideas about architecture became a prominent part of broader conversations about American culture history politics and race relations This rich and copiously illustrated interdisciplinary study explores the ways that American writing between roughly 1850 and 1930 concerned itself often intensely with the racial implications of architectural space primarily but not exclusively through domestic architecture In addition to identifying an archive of provocative primary materials *Sites Unseen* draws significantly on important recent scholarship in multiple fields ranging from literature history and material culture to architecture cultural geography and urban planning Together the chapters interrogate a variety of expressive American vernacular forms including the dialect tale the novel of empire letters and pulp stories along with the plantation cabin the West Indian cottage the Latin American plaza and the Oriental parlor These are some of the overlooked plots and structures that can and should inform a more comprehensive consideration of the literary and cultural meanings of American architecture Making sense of the relations between architecture race and American writing of the long nineteenth century in their regional national and hemispheric contexts *Sites Unseen* provides a clearer view not only of this catalytic era but also more broadly of what architectural historian Dell Upton has aptly termed the social experience of the built environment *Draper Transit Corridor Project*, 2010

Architectural Variability in the Southeast Cameron H. Lacquement,2007-10-28 Some of the most visible expressions of human culture are illustrated architecturally Unfortunately for archaeologists the architecture being studied is not always visible and must be inferred from soil inconsistencies or charred remains This study deals with research into roughly a millennium of Native American architecture in the Southeast and includes research on the variation of construction techniques employed both above and below ground

Expanding the View of Hohokam Platform Mounds Mark D. Elson,2016-12-15 For more than a hundred years archaeologists have investigated the function of earthen platform mounds in the American Southwest Built by the Hohokam groups between A D 1150 and 1350 these mounds are among the few monumental structures in the Southwest yet their use and the nature of the groups who built them remain unresolved Mark Elson now takes a fresh look at these monuments and sheds new light on their significance He goes beyond previous studies by examining platform mound function and social group organization through a cross cultural study of historic mound using groups in the Pacific Ocean region South America and the southeastern United States Using this information he develops a number of important new generalizations about how people used mounds Elson then applies these data to the study of a prehistoric settlement system in the eastern Tonto Basin of Arizona that contained five platform mounds He argues that the mounds were used variously as residences and ceremonial facilities by competing descent groups and were an indication of hereditary leadership They were important in group integration and resource management after abandonment they served as ancestral shrines Elson s study provides a fresh approach to an old puzzle and offers new suggestions

regarding variability among Hohokam populations Its innovative use of comparative data and analyses enriches our understanding of both Hohokam culture and other ancient societies A Heritage of Ruins William R. Chapman,2013-07-31 The ancient ruins of Southeast Asia have long sparked curiosity and romance in the world s imagination They appear in accounts of nineteenth century French explorers as props for Indiana Jones adventures and more recently as the scene of Lady Lara Croft s fantastical battle with the forces of evil They have been featured in National Geographic magazine and serve as backdrops for popular television travel and reality shows Now William Chapman s expansive new study explores the varied roles these monumental remains have played in the histories of Southeast Asia s modern nations Based on more than fifteen years of travel research and visits to hundreds of ancient sites A Heritage of Ruins shows the close connection between ruins conservation and both colonialism and nation building It also demonstrates the profound impact of European derived ideas of historic and aesthetic significance on ancient ruins and how these continue to color the management and presentation of sites in Southeast Asia today Angkor Pagan Bagan Borobudur and Ayutthaya lie at the center of this cultural and architectural tour but less visited sites including Laos s stunning Vat Phu the small temple platforms of Malaysia s Lembah Bujang Valley the candi of the Dieng Plateau in Java and the ruins of Mingun in Burma and Wiang Kum Kam near Chiang Mai in northern Thailand are also discussed All share a relative isolation from modern urban centers of population sitting in park like settings serving as objects of tourism and as lynchpins for local and even national economies Chapman argues that these sites also remain important to surrounding residents both as a means of income and as continuing sources of spiritual meaning He examines the complexities of heritage efforts in the context of present day expectations by focusing on the roles of both outside and indigenous experts in conservation and management and on attempts by local populations to reclaim their patrimony and play a larger role in protection and interpretation Tracing the history of interventions aimed at halting time s decay Chapman provides a chronicle of conservation efforts over a century and a half highlighting the significant part foreign expertise has played in the region and the ways that national programs have in recent years begun to break from earlier models The book ends with suggestions for how Southeast Asian managers and officials might best protect their incomparable heritage of art and architecture and how this legacy might be preserved for future generations

Fodor's 2011 Cancún, Cozumel & the Yucatán Peninsula 2011 Fodor's,2010-09-28 Discusses sightseeing beaches dining and accommodations *Beyond Chaco* Sarah A. Herr,2016-12-15 During the eleventh and twelfth centuries A D the Mogollon Rim region of east central Arizona was a frontier situated beyond and between larger regional organizations such as Chaco Hohokam and Mimbres On this southwestern edge of the Puebloan world past settlement poses a contradiction to those who study it Population density was low and land abundant yet the region was overbuilt with great kivas a form of community level architecture Using a frontier model to evaluate household community and regional data Sarah Herr demonstrates that the archaeological patterns of the Mogollon Rim region were created by the flexible and creative

behaviors of small scale agriculturalists These people lived in a land rich and labor poor environment in which expediency mobility and fluid social organization were the rule and rigid structures and normative behaviors the exception Herr s research shows that the eleventh and twelfth century inhabitants of the Mogollon Rim region were recent migrants probably from the southern portion of the Chacoan region These early settlers built houses and ceremonial structures and made ceramic vessels that resembled those of their homeland but their social and political organization was not the same as that of their ancestors Mogollon Rim communities were shaped by the cultural backgrounds of migrants by their liminal position on the political landscape and by the unique processes associated with frontiers As migrants moved from homeland to frontier a reversal in the proportion of land to labor dramatically changed the social relations of production Herr argues that when the context of production changes in this way wealth in people becomes more valuable than material wealth and social relationships and cultural symbols such as the great kiva must be reinterpreted accordingly Beyond Chaco expands our knowledge of the prehistory of this region and contributes to our understanding of how ancestral communities were constituted in lower population areas of the agrarian Southwest

a Process in Architecture Yonca Hurol, 2025-07-22 Detailed research based review of the intersection of building processes and tectonics with case studies and theoretical reflections Tectonics as a Process in Architecture explores the dynamic nature of building processes and their impact on architectural tectonics Detailed case studies and theoretical reflections are included to help readers see how recognizing tectonics as a process can be beneficial The book is based on research that was conducted to document all changes during the building processes of a house through close engagement between the researcher and the building the researcher was also the building's owner a neighbor to it its architect and a construction control This close connection enabled the capture of numerous changes some resulting in tectonic affects while others reflected innovative approaches These changes were introduced by various actors in the process including contractors builders and foremen In Tectonics as a Process in Architecture readers will find Invaluable insights on why tectonics is not merely as an outcome but an inclusive collaborative process that enhances architectural quality Two process maps one for tectonic affects and one for innovative approaches Evolving changes during construction and their potential to foster innovation A theory on procedural and inclusive tectonics primarily focused on details Due to its multifaceted nature Tectonics as a Process in Architecture will appeal to academics students and professionals interested in the intersection of architectural engineering construction and tectonic principles

Architectures of Emergency in Turkey Eray Çaylı, Pinar Aykac, Sevcin Ercan, 2021-10-21 Challenging existing political analyses of the state of emergency in Turkey this volume argues that such states are not merely predetermined by policy and legislation but are produced regulated distributed and contested through the built environment in both embodied and symbolic ways Contributors use empirical critical spatial research carried out in Turkey over the past decade exploring heritage displacement and catastrophes Contributing to the broader literature on the related concepts of exception risk crisis and uncertainty the book discusses the ways in which these phenomena shape and are shaped by the built environment and provides context specific empirical substance to it by focusing on contemporary Turkey In so doing it offers nuanced insight into the debate around emergency as well as into recent urban architectural affairs in Turkey

Crafting Preservation Criteria John H. Sprinkle, Jr., 2014-03-05 In 1966 American historic preservation was transformed by the passage of the National Historic Preservation Act which created a National Register of Historic Places Now comprising more than 14 million historic properties across the country the National Register is the official federal list of places in the United States thought to be worthy of preservation One of the fundamental principles of the National Register is that every property is evaluated according to a standard set of criteria that provide the framework for understanding why a property is significant in American history The origins of these criteria are important because they provide the threshold for consideration by a broad range of federal preservation programs from planning for continued adaptive use to eligibility for grants and inclusion in heritage tourism and educational programs Crafting Preservation Criteria sets out these preservation criteria for students explaining how they got added to the equation

and elucidating the test cases that allowed for their use From artworks to churches from the fifty year rule to the historic scene students will learn how places have been historically evaluated to be placed on the National Register and how the criteria evolved over time *Catalogue of the University of Michigan* University of Michigan,1936 Announcements for the following year included in some vols General Register University of Michigan,1935 Announcements for the following year included in some vols
