Six Sigma in Transactional and Service Environments Hasan Akpolat, 2017-03-02 In 1987 Motorola developed Six Sigma out of a need for improvement in their pager manufacturing processes Since then Six Sigma has been implemented by a number of manufacturing companies predominantly in the USA In the late 1990s however Six Sigma gained wider and international popularity due to successful implementation at General Electric Six Sigma has now become one of the integral aspects of manufacturing as well as non manufacturing businesses worldwide In recent years many books have been published on Six Sigma mainly on its application in manufacturing and product development This book by contrast focuses specifically on the application of Six Sigma in service and transactional environments The book comprises two parts Part One provides the necessary knowledge for understanding the Six Sigma

methodology and its underlying concepts Part Two consists of practical examples of Six Sigma application to transactional and service environments which have been provided in the form of real world case studies written by internationally successful companies to complement the reader's knowledge of Six Sigma and to increase comprehension of issues surrounding Six Sigma implementations It has been written for newcomers as well as for experienced practitioners who are interested in improving processes in everyday business operations The focus is on the implementation of the Six Sigma methodology rather than on the statistical tools and techniques The aim of this book is to provide the reader with some practical and useful guidelines for Six Sigma deployment and its application to transactional and service processes

Agile and Lean Office Ade Asefeso MCIPS MBA, 2012-08-14 Agile and lean office are so deeply interwoven that if you are doing agile you are doing lean and vice versa Those considering process change will likely find the description of the interrelatedness interesting and enlightening The question should I use Lean office instead of Agile office is based on a false premise because office environments are complex systems There can be thousands of integration points as information flows along a value stream As a result it is almost impossible to understand in detail how a change to one part of a value stream will impact the rest of the system wide value streams of the organization The Agile and Lean office approach use a program of continuous performance improvement This approach does not try to accomplish too much at once and risk complete failure but to make an incremental change to a value stream wait for the system to settle down fully understand the system wide impact of the changes and then decide what new change to make
