## **Slide Rules And Submarines:**

**Slide Rules and Submarines** Montgomery C. Meigs, 2002-06 The classic problem of when to depend on lessons learned from previous conflicts and when to employ new tactics and technology always confronts military leaders At the beginning of World War II for example Allied naval strategists were prepared to do battle using traditional tactics against surface vessels but this study contends not against submarines because the strategists failed to appreciate either the damage done by submarines in World War I or the tactics that had worked successfully against them Consequently from the beginning of World War II to mid 1943 German U boats were able to mount a devastating campaign against Allied shipping In *Slide Rules and Submarines* Montgomery Meigs describes how the allies learned to counter the U boat threat Using new technology and new tactics derived from scientific methods they devised countermeasures to defeat the German submarine menace Then continuing to apply those successful measures they went on to negate the Japanese submarine threat in the Pacific The author cites the crucial role of civilian scientists the outsiders who worked with military staffs and operational commanders of the campaign at sea Their open minds and objective methods were essential for the application of such tactical advances as sonar and radar acoustic torpedoes depth finders and code breaking to the battle As this study illustrates the importance of such timely and innovative cooperation among scientists the research and development community and military commanders in bringing technological knowledge to bear for operational and strategic advantage cannot be overstated Meigs study of how such cooperation succeeded in the crucible of wartime crisis is itself an example of how the lessons of the past can serve us well today J A Baldwin Vice Admiral United States Navy President National Defense University *Slide Rules and Submarines* DIANE Publishing Company, 1994-07-01 Black and white photos *Slide Rules and Submarines - American Scientists and Subsurface Warfare in World War 2* National Defense University, 1990 **The Secret in Building 26** Jim DeBrosse, Colin B. Burke, 2005 For the first time the inside story of the brilliant American engineer who defeated Enigma and the Nazi code masters Much has been written about the success of the British Ultra program in cracking the Germans Enigma code early in World War II but few know what really happened in 1942 when the Germans added a fourth rotor to the machine that created the already challenging naval code and plunged Allied intelligence into darkness Enter one Joe Desch an unassuming but brilliant engineer at the National Cash Register Company in Dayton Ohio who was given the task of creating a machine to break the new Enigma settings It was an enterprise that rivaled the Manhattan Project for secrecy and complexity and nearly drove Desch to a breakdown Under enormous pressure he succeeded in creating a 5 000 pound electromechanical monster known as the Desch Bombe which helped turn the tide in the Battle of the Atlantic but not before a disgruntled co worker attempted to leak information about the machine to the Nazis After toiling anonymously it even took his daughter years to learn of his accomplishments Desch was awarded the National Medal of Merit the country s highest civilian honor In *The Secret in Building 26* the entire thrilling story of the final triumph over Enigma is finally told

**Blackett's War** Stephen Budiansky, 2013-02-19 A Washington Post Notable Book In March 1941 after a year of devastating U boat attacks the British War Cabinet turned to an intensely private bohemian physicist named Patrick Blackett to turn the tide of the naval campaign Though he is little remembered today Blackett did as much as anyone to defeat Nazi Germany by revolutionizing the Allied anti submarine effort through the disciplined systematic implementation of simple mathematics and probability theory This is the story of how British and American civilian intellectuals helped change the nature of twentieth century warfare by convincing disbelieving military brass to trust the new field of operational research

Battle of the Atlantic Marc Milner,2011-07-31 World War II was only a few hours old when the Battle of the Atlantic the longest campaign of the Second World War and the most complex submarine war in history began with the sinking of the unarmed passenger liner Athenia by the German submarine U30 Based on the mastery of the latest research and written from a mid Atlantic rather than the traditional Anglo centric perspective Marc Milner focuses on the confrontation between opposing forces and the attacks on Allied shipping that lay at the heart of the six year struggle Against the backdrop of the battle for the Atlantic lifeline he charts the fascinating development of U boats and the techniques used by the Allies to suppress and destroy these stealth weapons      **Nation's Navy** Michael L.
