Social Security Programs And Retirement Around The World Micro Estimation:

Social Security Programs and Retirement around the World Jonathan Gruber, David A. Wise, 2009-02-15 The future of Social Security is troubled both in the United States and in most other developed countries with aging populations. As improvements in health care and changes in life styles enable retirees to live longer than ever before, the stress on national budgets will increase substantially. In *Social Security Programs and Retirement around the World*, Jonathan Gruber, David A. Wise, and experts in many countries examine the consequences of reforming retirement benefits in a dozen nations. Drawing on the work of an international group of noted economists, the editors argue that social security programs provide strong incentives for workers to leave the labor force by retiring and taking the benefits to which they are entitled. By penalizing work, social security systems magnify the increased financial burden caused by aging populations, thus contributing to the insolvency of the system. This book is a model of comparative analysis that evaluates the effects of illustrative policies for countries facing the impending rapid growth of social security benefits. Its insights will help inform one of the most pressing debates.

Social Security Programs and Retirement around the World Jonathan Gruber, David A. Wise, 2009-02-15 *Social Security Programs and Retirement around the World* represents the second stage of an ongoing research project studying the relationship between social security and labor. In the first volume, Jonathan Gruber and David A. Wise revealed enormous disincentives to continued work at older ages in developed countries. Provisions of many social security programs typically encourage retirement by reducing pay for work, inducing older employees to leave the labor force early and magnifying the financial burden caused by an aging population. At a certain age, there is simply no financial benefit to continuing to work. In this volume, the authors turn to a country-by-country analysis of retirement behavior based on micro data. The result of research compiled by teams in twelve countries, the volume shows an almost uniform correlation between levels of social security incentives and retirement behavior in each country. The estimates also show that the effect is strikingly uniform in countries with very different cultural histories, labor market institutions, and other social characteristics.

Social Security Programs and Retirement Around the World Jonathan Gruber, David A. Wise, 2002 This is the introduction to and summary of the second stage of an international research project to study the relationship between social security provisions and retirement. The project relies on the analyses of a large group of economists in 12 countries who conduct the analysis for each of their countries. In the first stage, we documented the enormous disincentives for continued work at older ages in many countries. The introduction to the first volume from the project concluded with a striking graph showing a strong relationship across countries between social security program incentives to retire and the proportion of older persons out of the labor force. The results in this volume show the large magnitude of these effects. Across 12 countries with very different social security programs and labor market institutions, the results consistently show that program incentives accord strongly with retirement decisions. The magnitude is illustrated by the simulations reported in each country paper. Considering the average

across all countries a reform that delays benefit eligibility by three years would likely reduce the proportion of men 56 to 65 out of the labor force between 23 and 36 percent perhaps closer to 36 percent in the long run On the other hand an illustrative common reform with early retirement at age 60 normal retirement age 65 and actuarial reduction in benefits between 65 and 60 has very disparate effects across the countries depending on the provisions of the current program in each country There is a strong correspondence between the simulation results and a priori expectations The results leave little doubt that social security incentives have a strong effect on retirement decisions And the estimates show that the effect is similar in countries with very different cultural histories labor market institutions and other social characteristics While countries may differ in many respects the employees in all countries react similarly to social security retirement incentives The simulated effects of illustrative reforms reported in the country papers make clear that changes in the provisions of social security programs would have very large effects on the labor force participation of older employees Social Security Programs and Retirement Around the World Jonathan Gruber, David A. Wise, 2004 Social Security Programs and Retirement around the World David A. Wise, 2016-01-13 Even as life expectancy in many countries has continued to increase social security and similar government programs can provide strong incentives for workers to leave the labor force when they reach the age of eligibility for benefits Disability insurance programs can also play a significant role in the departure of older workers from the labor force with many individuals in some countries relying on disability insurance until they are able to enter into full retirement The sixth stage of an ongoing research project studying the relationship between social security programs and labor force participation this volume draws on the work of an eminent group of international economists to consider the extent to which differences in labor force participation across countries are determined by the provisions of disability insurance programs Presented in an easily comparable way their research covers twelve countries including Canada Japan and the United States and considers the requirements of disability insurance programs as well as other pathways to retirement **International Perspectives on Social Security Reform** Rudolph Gerhard Penner, 2007 Papers from a February 24 2006 conference held by the Urban Institute to examine social security reform in six OECD countries

Retirement Timing and Social Stratification Jonas Radl, 2014-09-18 The monograph disseminates the very topical issue of retirement and its timing as the key to one of the greatest challenges facing ageing societies Postponing retirement is now almost universally regarded as indispensable in order to relieve European welfare states from the demography related financial pressures This seminal study derived from a statistical analysis of a large scale survey data provides a thorough understanding of the micro and macro level determinants of retirement timing in contemporary Western Europe The book is the first monograph to combine the analysis of the retirement attitudes with the analysis of the retirement behaviour within one research It tackles the question as to whether early retirement can be explained by early exit culture triangulating life course theory with a social stratification approach The author used a novel and innovative approach to obtain the results The

methodology includes tobit models of proscriptive age norms simulations of the impact of class structure on a country's average retirement age competing risks models of different work exit modalities duration selection models of retirement timing

Older Workers in a Globalizing World Dirk Hofäcker, 2010-01-01 the book can be recommended to all with an interest in the issue of older workers in a globalised world Ageing and Society Early retirement has been a policy to cope with the problems of massive unemployment in many Western welfare states However it has become apparent that this strategy is costly and destroys human capital urgently needed in ageing societies This book offers a comprehensive and up to date study of late career patterns and processes of early retirement in fourteen OECD countries using both cross sectional and longitudinal data It is an important contribution to life course research and will provide the foundation for any serious discussion on pension reforms and increasing the employability of older workers Hans Jürgen Andre University of Cologne Germany This timely book investigates the growth of the early retirement trend and its varying spread among different groups of older workers in fourteen modern societies It argues for a differentiated political approach to reverse early retirement which relies on both pension and employability policies for older workers Examining the early retirement trend virtually all modern societies have been faced with since the onset of the globalization process in the 1970s and 1980s this book provides a thorough analysis of older workers late careers and their retirement transitions as well as explaining why this trend has developed differently between nations To promote an effective reversal of the early retirement trend national policymakers are advised not to concentrate their efforts exclusively on reducing the financial incentives for an early exit still present in most national pension systems In addition it is also recommended that they invest in the employability of older workers implying a thorough reconsideration of the design of education and labor market policies Dirk Hofäcker presents a unique and comprehensive

synthesis of theories describing and explaining the trend towards early retirement and critically discusses their comparative advantages and shortcomings Researchers and students of sociology economics gerontology demography and comparative welfare states should not be without this book and policymakers and practitioners dealing with labor market policies will find it invaluable

Pension reform is high on the agenda of many advanced and emerging market economies for many reasons First public pensions often constitute a large share of government expenditure Second population aging means that reforms would be needed just to keep pension spending from rising in the future Third in many economies low or falling pension coverage will leave large segments of the population without adequate income in old age and at risk of falling into poverty Although a number of studies have assessed the effects of pension reforms on fiscal sustainability a systematic analysis of equity issues in pension systems and how countries have grappled with these issues has yet to be undertaken This book brings together the latest research on equity issues related to pension systems and pension reforms in the post crisis world Some of the key issues covered include the effect of pension systems on intergenerational equity and the impact of pension reforms on poverty the effects of pension reform measures on fiscal sustainability and equity and the fiscal consequences of achieving different equity goals It also presents country case studies The volume provides a rich menu of material to assist policymakers and academic audiences seeking to understand the latest research in this area as well as the lessons and challenges for the design of reforms

Dimensions of Competitiveness Paul De Grauwe, 2010-07-23 Leading economists analyze the multiple factors that drive competitiveness among nations in world markets Competitiveness among nations is often approached as if it were a sports competition some countries win medals others lose out This view of countries fighting it out in the economic arena is especially popular in business circles and among politicians Economists however take a very different approach to international economic relations arguing that international trade leads not to winners and losers but to win win situations in which all countries profit In this volume leading economists take on the sometimes derided concept of competitiveness demonstrating the value of systematic analysis in an area too often dominated by special interest groups who use and abuse the concept to advance hidden agendas The chapters range from broad theoretical views to case studies examining the multiple factors that drive competitiveness Contributors consider the conceptual framework underlying the World Economic Forum s approach to competitiveness differences in per capita GDP between the United States and the European Union an integrated approach to measuring competitiveness and comparative advantage divergent trends in price and cost competitiveness in the euro area methodological issues in constructing competitiveness indicators taxation and international competitiveness and a case study of Mexico s competitiveness in world markets in comparison to China s Contributors Harry P Bowen Michele Ca Zorzi Jean Philippe Cotis Romain Duval Christoph Fischer Michael S Knoll Inmaculada Martinez Zarzoso Wim Moesen Felicitas Nowak Lehmann Xavier Sala i Martin Bernd Schnatz Alain de Serres Eckhard Siggel Sebastian Vollmer *International Handbook of Population Aging* Peter Uhlenberg, 2009-04-29 The International Handbook of Population Aging examines research on a wide array of the profound implications of population
