Methodology of Social Research Dr. Vidyapati Gautam, 2021-09-11 Social scientists are divided into camps of support for particular research techniques These disputes relate to the historical core of social theory positivism and antipositivism structure and agency While very different in many aspects both qualitative and quantitative approaches involve a systematic interaction between theory and data The choice of method often depends largely on what the researcher intends to investigate For example a researcher concerned with drawing a statistical generalization across an entire population may administer a survey questionnaire to a representative sample population There are no laws in social science that parallel the laws in natural science Law in social science is a universal generalization about a class of facts A fact is an observed phenomenon and observation means it has been seen heard or otherwise experienced by the researcher A theory is a systematic explanation for the observations that relate to a particular aspect of social life Concepts are the basic building blocks of theory and are abstract elements representing classes of phenomena Axioms or postulates are basic assertions assumed to be true Propositions are conclusions drawn about the relationships among concepts based on analysis of axioms This book is designed for students at the beginning of their journey in social research It aims to provide an accessible practically oriented introduction to social research methods The research methods included in this book are selected on the basis of their relevance to contemporary social research practice Contents Survey Methodology Multimethodology Observational Field Research Scientific Methods in Social Work Research Critical Action Research in Social Work Evaluation Design and Methods Ethics and the Ruling Relations of Research Production Multivariate Statistics Statistical Power Descriptive Research

Social Workers' Desk Reference, 2015-04-20 People all over the world are confronted by issues such as poverty a lack of access to quality education unaffordable and or inadequate housing and a lack of needed health and mental services on a daily basis Due to these issues there is a need for social workers who have access to relevant and timely scholarly materials in order to meet the needs of those facing these issues The social psychological and biological factors

resulting from these issues determine the level of a person's mental health at any given point in time and it is necessary for social workers to continue to evolve and develop to the new faces and challenges of the times in order to adequately understand the effects of these issues. This third edition continues in the same tradition and continues to respond to the changes occurring in society and how they are impacting the education research and practice of social work as a whole. With 159 chapters collaboratively written by luminaries in the profession this third edition serves as a comprehensive guide to social work practice by providing the most recent conceptual knowledge and empirical evidence to aid in the understanding of the rapidly changing field of social work. Evaluation and Social Work Practice Ian Shaw, Joyce Lishman, 1999-05-28 Evaluation and Social Work Practice offers a comprehensive treatment of the central issues confronting evaluation in social work that links theory and method to practical applications. Evaluation is an integral part of social work and social care provision for both practice and service delivery. Evaluation can improve effectiveness and increase accountability and help develop new models of practice and service delivery. The authors argue that evaluation should not just be applied to practice but should be a direct dimension of practice. Appealing to the student, researcher and practitioner, Evaluation and Social Work Practice will become the standard reference source on evaluation.
