Threads of Thinking Cathy Nutbrown, 2011-03-17 In her new edition of this popular book Cathy Nutbrown presents evidence of continuity and progression in young children's thinking. She shows with detailed observation that they are able and active learners. She considers aspects of children's patterns of learning and thinking or schemas and demonstrates clearly how children learn in an active dynamic and creative way. This book makes schema theory explicit in practice. Supported by numerous detailed examples and the discussion of difficult theoretical issues it illustrates children's learning in areas such as literacy, maths and science. This new edition includes discussion on the need for professional development, changes in early years pedagogy, more discussion of theories of learning in relation to curriculum and teaching practices, new examples of children's drawings, new suggestions for using stories to support schemas. *Threads of Thinking* is for early years practitioners who wish to support and develop children's learning. Professor Cathy Nutbrown is Director of Studies in Early Childhood Education at the University of Sheffield.

Dialogue and the Development of Children's Thinking Neil Mercer, Karen Littleton, 2007-06-22 This book draws on extensive research to provide a ground-breaking new account of the relationship between dialogue and children's learning development. It closely relates the research findings to real-life classrooms so that it is of practical value to teachers and students concerned that their children are offered the best possible learning opportunities. The authors provide a clear, accessible and well-illustrated case for the importance of dialogue in children's intellectual development and support this with a new and more educationally relevant version of socio-cultural theory which explains the fascinating relationship between dialogues and learning. In educational terms, a sociocultural theory that relates social, cultural and historical processes, interpersonal communication and applied linguistics is an ideal way of explaining how school experience helps children learn and develop. By using evidence of how the collective construction of knowledge is achieved and how engagement in dialogues shapes children's educational progress and intellectual development, the authors provide a text which is essential for educational researchers, postgraduate students of education and teachers and is also of interest to many psychologists and applied linguists.
