## Sources Of Plasma Physics Volume 1:

**Sources of Plasma Physics** Herbert S. Green, R. B. Leipnik, 1970      Sources of plasma physics H. S. Green, R. B. Leipnik, 1970      **Handbook of Ion Sources** Bernhard Wolf, 2017-07-12 The Handbook of Ion Sources delivers the data needed for daily work with ion sources. It also gives information for the selection of a suitable ion source and ion production method for a specific application. The Handbook concentrates on practical aspects and introduces the principle function of ion sources. The basic plasma parameters are defined and discussed. The working principles of various ion sources are explained and examples of each type of ion source are presented with their operational data. Tables of ion current for various elements and charge states summarize the performance of different ion sources. The problems related to the production of ions of non gaseous elements are detailed and data on useful materials for evaporation and ion source construction are summarized. Additional chapters are dedicated to extraction and beam formation, ion beam diagnosis, ion source electronics and computer codes for extraction, acceleration and beam transport. Emittance and brilliance are described and space charge effects and neutralization discussed. Various methods for the measurement of current profile, emittance and time structure are presented and compared. Intensity limits for these methods are provided for different ion energies. Typical problems related to the operation of ion source plasmas are discussed and practical examples of circuits are given. The influence of high voltage on ion source electronics and possibilities for circuit protection are covered. The generation of microwaves and various microwave equipment are described and special problems related to microwave operation are summarized. The Handbook of Ion Sources is a valuable reference on the subject of benefit to practitioners and graduate students interested in accelerators, ion implantation and ion beam techniques.      Literature 1985, Part 1 S. Böhme, U. Esser, Prof. Dr. W. Fricke, H. Hefe, Inge Heinrich, W. Hofmann, R. Krahn, V. R. Matas, Dr. Lutz D. Schmadel, G. Zech, 2013-12-11 **Astronomy and Astrophysics Abstracts** aims to present a comprehensive documentation of the literature concerning all aspects of astronomy, astrophysics and their border fields. It is devoted to the recording, summarizing and indexing of the relevant publications throughout the world. **Astronomy and Astrophysics Abstracts** is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union. Volume 39 records literature published in 1985 and received before August 15, 1985. Some older documents which we received late and which are not surveyed in earlier volumes are included too. We acknowledge with thanks contributions of our colleagues all over the world. We also express our gratitude to all organizations, observatories and publishers which provide us with complimentary copies of their publications. On account of the introduction of an object index, the scope of index information will be considerably enlarged beginning with this volume. In connection with the subject index, an additional source to satisfy the needs of retrieval is opened up. Starting with Volume 33, all the recording, correction and data processing work was done by means of computers. The recording was done by our technical staff members: Ms Helga Ballmann, Ms Mona El Choura, Ms Monika Kohl, Ms Sylvia Matyssek, Ms Karin

Burkhardt Ms Susanne Schlotelburg and Mr Stefan Wagner supported our task by careful proofreading It is a pleasure to thank them all for their encouragement Heidelberg September 1985 The Editors Contents Introduction     Documentation of Plasma Physics.
