Climatic Geomorphology M. Gutierrez Elorza, 2005-12-29 During the past few decades climatic geomorphology has been substantially enlarged in knowledge thanks to numerous detailed investigations the application of a large number of techniques and the acquisition of abundant absolute dates The challenge of predicting the

effects of the prophesied future global warming on morphogenetic processes and landforms has encouraged geomorphologists to study the Late Pleistocene and Holocene climatic changes from the geomorphological and geological record. The advances achieved in the field of climatic geomorphology during the past years are reflected by the publication of several specific monographs about the different morphoclimatic zones. The aim of this book is to provide an up to date general view of this branch of geomorphology. It includes a chapter on applied geomorphology for each morphoclimatic zone providing an approximation of the main environmental problems. Geoscientists geomorphologists

Inland Waters of Southern Africa: An Ecological Perspective B.R. Allanson, R.C. Hart, J.H. O'Keeffe, R.D. Robarts, 2012-12-06

Limnology the study of inland waters had its genesis in Europe about the turn of the century. The studies of Forel on Lake Geneva were of seminal value at this time. It prospered under the early guidance of Thienemann, Naumann and Wesenberg Lund in Europe and soon transplanted to Birge and Juday in North America to name just a few early spirits. Now limnology is a respectable scientific discipline taught at many universities and limnologists are recognized as important contributors to our understanding of how this fragile spaceship functions. All this acknowledged it must also be acknowledged that limnology is not yet a globally comprehensive science. To be sure much is known about globally applicable processes and the structural elements of aquatic ecosystems worldwide but limnological emphases interests and concerns remain essentially European and North American in balance. Much is known about lakes and rivers in less than one fifth of the world's land area northern temperature regions rather little is known about inland waters elsewhere

The Place of Geomorphology in the Geographic Sciences, *Tectonic Geomorphology of Mountains* William B. Bull, 2008-04-15

With a balance of theory and practical applications *Tectonic Geomorphology of Mountains* is essential reading for research geologists and upper level undergraduate and graduate students in the earth sciences. This book describes how tectonic events influence geomorphic processes and explores how landscapes respond to tectonic deformation in the ways in which they are weathered, washed and abraded. Uses new approaches to enhance theoretical models of landscape evolution and to solve practical problems such as the assessment of earthquake hazards. Includes previously unpublished research and theory. Examines how to use key landforms as reference levels in changing landscapes. Estimates rates of mountain range uplift and maps seismic shaking caused by prehistorical earthquakes. Presents a diverse range of examples from around the world

The History of the Study of Landforms, Or, The Development of Geomorphology Robert Percy Beckinsale, Richard J. Chorley, 1991

This volume provides a global treatment of historical and regional geomorphic work as it developed from the end of the nineteenth century to the hiatus of the Second World War. The book deals with the burgeoning of the eustatic theory, the concepts of isostasy and epeirogeny and the first complete statements of the cycle of erosion and of polycyclic denudation chronology

The Geography of South Africa Jasper Knight, Christian M. Rogerson, 2018-10-03

This edited collection examines contemporary directions in geographical research on South Africa. It encompasses a cross section of selected

themes of critical importance not only to the discipline of Geography in South Africa but also of relevance to other areas of the Global South All chapters are original contributions providing a state of the art research baseline on key themes in physical human and environmental geography and in understanding the changing geographical landscapes of modern South Africa These contributions set the scene for an understanding of the relationships between modern South Africa and the wider contemporary world including issues of sustainable development and growth in the Global South

50 Must-See Geological Sites in South Africa Gavin Whitfield, 2016-01-11 The book presents 50 of the most recognizable and geologically interesting sites around South Africa including some of palaeontological or historical renown and some of mining interest The diverse selection includes sites such as Chapman s Peak Howick Falls Walter Sisulu National Botanical Gardens Mapungubwe Tswaing Meteorite Crater and the Fraserburg Fossil Surface Each site is unpacked to reveal key features geological heritage landscape and rock formations topics of local or historical interest things to see and do at the site and in the surrounding area Maps and GPS pointers make the sites easy to find and some of the more complicated features are explained by means of simplified diagrams Nearly 1 000 colour images illustrate South Africa s remarkable geology and bring the topic vividly to life making the book suitable for armchair travel too
