South West England British Regional Geology S:

Quaternary of South-West England S. Campbell, C.O. Hunt, James D. Scourse, D.H. Keen, N. Stephens, 2012-12-06

STRUCTURE OF THE VOLUME AND TERMINOLOGY USED This book contains scientific descriptions of 63 localities Figure A of at least national importance for Quaternary geology geomorphology and environmental change in South West England These sites were selected by the Geological Conservation Review and are accordingly designated GCR sites Chapter 1 provides an introduction to the Quaternary Chapter 2 synthesizes the geomorphological development and Quaternary history of the region and outlines the principles involved in site selection The individual GCR site descriptions form the core of the book In the following chapters sites are arranged and described in broad geographic areas and by research topic This is necessitated by the widely disparate nature of the field evidence in South West England sites demonstrating the full range of Quaternary and geomorphological features are not evenly and conveniently dispersed throughout the region and some areas have significant gaps Neither do the individual chapters contain sites that necessarily equate with particular site selection networks Rather the chosen chapter headings provide the least repetitive means of describing the sites and background material Where possible a chronological approach from oldest to youngest has been used to describe sites within a given chapter Again this approach is not always possible and a group of sites may show variations on landform or Stratigraphic evidence broadly within one major time interval or chronostratigraphic stage inevitably there are many overlaps British Regional Geology: Northern England B. J. Taylor, 1971 Landscapes and Landforms of England and Wales Andrew Goudie, Piotr Migoń, 2020-05-10 This book presents the geomorphological diversity of England and Wales These regions are characterised by an extraordinary range of landforms and landscapes reflecting both the occurrence of many different rock types and drastic climatic changes over the last few million years including ice sheet expansion and decay The book begins by providing the geological and geomorphological context needed in order to understand this diversity in a relatively small area In turn it presents nearly thirty case studies on specific landscapes and landforms all of which are landmarks in the territory discussed These include the famous coastal cliffs and landslides granite tors of Dartmoor formerly glaciated mountains of Snowdonia and the Lake District karst of Yorkshire and many others The geomorphology of London and the Thames is also included Providing a unique reference guide to the geomorphology of England and Wales the book is lavishly illustrated with diagrams colour maps and photos and written in an easy to read style The contributing authors are distinguished geomorphologists with extensive experience in research writing and communicating science to the public The book will not only be of interest to geoscientists but will also benefit specialists in landscape research geoconservation tourism and environmental protection **British Sources of Information** P. Jackson, 2003-09-02 This comprehensive and versatile reference source will be a most important tool for anyone wishing to seek out information on virtually any aspect of British affairs life and culture The resources of a detailed bibliography directory and journals listing are combined in this

single volume forming a unique guide to a multitude of diverse topics British politics government society literature thought arts economics history and geography Academic subjects as taught in British colleges and universities are covered with extensive reading lists of books and journals and sources of information for each discipline making this an invaluable manual

The English Catalogue of Books Published from January, 1835, to January, 1863, 1864 **The Geology of England and Wales** P. J. Brechley, Peter Franklin Rawson, 2006 This second edition of The Geology of England and Wales is considerably expanded from its predecessor reflecting the increase in our knowledge of the region and particularly of the offshore areas Forty specialists have contributed to 18 chapters which cover a time range from 700 million years ago to 200 million years into the future A new format places all the chapters in approximately temporal order Both offshore and economic geology now form an integral part of appropriate chapters **Roman and Medieval Exeter and their Hinterlands** Stephen Rippon, Neil Holbrook, 2021-03-23 This first volume presenting research carried out through the Exeter A Place in Time project provides a synthesis of the development of Exeter within its local regional national and international hinterlands Exeter began life in c AD 55 as one of the most important legionary bases within early Roman Britain and for two brief periods in the early and late 60s AD Exeter was a critical centre of Roman power within the new province When the legion moved to Wales the fortress was converted into the civitas capital for the Dumnonii Its development as a town was however relatively slow reflecting the gradual pace at which the region as a whole adapted to being part of the Roman world The only evidence we have for occupation within Exeter between the 5th and 8th centuries is for a church in what was later to become the Cathedral Close In the late 9th century however Exeter became a defended burh and this was followed by the revival of urban life Exeter's wealth was in part derived from its central role in the south west's tin industry and by the late 10th century Exeter was the fifth most productive mint in England Exeter's importance continued to grow as it became an episcopal and royal centre and excavations within Exeter have revealed important material culture assemblages that reflect its role as an international port *Correlation of the Silurian Rocks of the British Isles* Alfred M. Ziegler, R. B. Rickards, W. S. McKerrow, 1974-01-01 Geological Hazards in the UK D.P. Giles, J.S. Griffiths, 2020-06-09 The UK is perhaps unique globally in that it presents the full spectrum of geological time stratigraphy and associated lithologies within its boundaries With this wide range of geological assemblages comes a wide range of geological hazards whether they be geophysical earthquakes effects of volcanic eruptions tsunami landslides geotechnical collapsible compressible liquefiable shearing swelling and shrinking soils geochemical dissolution radon and methane gas hazards or georesource related coal chalk and other mineral extraction An awareness of these hazards and the risks that they pose is a key requirement of the engineering geologist The Geological Society considered that a Working Party Report would help to put the study and assessment of geohazards into the wider social context helping the engineering geologist to better communicate the issues concerning geohazards in the UK to the client and the public This volume sets out to define and explain these geohazards to detail their

detection monitoring and management and to provide a basis for further research and understanding

Spilites and Spilitic Rocks G.C. Amstutz, 2012-12-06 The idea for the present Spilite Volume was born during the Spilite Symposium at the XXIIIrd session of the International Geological Congress in Prague 1968 At that time only a restricted number of petrologists working on spilites was present and therefore the group assembled agreed that a Symposium Volume should also include recent papers by many other spilite specialists At the same time it was agreed that the papers presented at the Symposium should be returned to the authors for changes and additions This procedure of upgrading and amending the papers has continued until this year 1973 for various technical and editorial reasons The information presented here is therefore up to date To those familiar with the spilite problem it is obvious that the time had come for a review of its state Also the existing literature had become so voluminous that a monographic review was necessary Following a modern trend the authorship for this review was spread among specialists with variable experience For readers not necessarily familiar with the spilite problem a brief summary is presented here A short historical note is followed first by the observations then by the interpretations finally by some of the major features of scientific logic as they pertain to the problem of the primary or secondary origin of some of the rocks termed spilites and keratophyres

Lamprophyres N. M. S. Rock, 2013-11-11 Following their recognition by Gumbel 1874 lamprophyres were treated for an entire century as little more than obscure curiosities Although this situation has changed recently with a flowering of publications and active workers lamprophyres remain almost the only group of igneous rocks which have not yet received attention in a dedicated monograph In five exploratory reviews 1977 1987 the writer aimed to set out what was known about these rocks The IUGS Subcommittee on igneous rock systematics had meanwhile presented its nomenclatural framework Streckeisen 1979 All this has now been overtaken by a recent explosion of interest epitomized not least by lamprophyres greater prominence in the 4th International Kimberlite Conference Proceedings More data have become available since 1985 than over the entire previous century and it is obviously impossible for such an extraordinary outpouring to be fully reviewed in this first preliminary book At the risk of dissatisfying some readers therefore this book concentrates on factual matters and on a broad overview rather than minutiae Because not even a world map of known lamprophyres was previously available almost half the book is deliberately taken up by the first global lamprophyre compilation and its commensurately extensive Bibliography Such a compendium of largely objective information is believed to be of more immediate interest and lasting value than a premature pottage of petrogenetic polemic Chapters 1-7 bring previous studies up to date and concentrate on factual information
