Berger, Karl-Ernst Behre, Eystein Jansen, 2013-03-09 The global environment is changing rapidly under the impact of human activities and an important element of this change is related to global climate modification Can the study of climate and history help in devising strategies for coping with this change What might be the type of information most useful in this context What are the pitfalls awaiting the unwary These are the kinds of questions that led us to bring together experts from the natural and social sciences with a strong interest in history to promote discussion between workers in different disciplines by focussing on a common topic of great interest to society The meeting was arranged in the framework of a Hanse Conference within the interdisciplinary program of the Hanse Wissenschaftskolleg a foundation set up to promote interdisciplinary studies in collaboration between the universities of Bremen and Oldenburg The aim of the Hanse Conferences in general is to provide opportunities for experts from different fields of the sciences and humanities to come together and explore the larger framework of topics of common interest What unites the participants is

their desire to look over the fence to neighboring disciplines Young colleagues who wish to build an interdisciplinary career are particularly welcome In the Hanse Conference on Climate and History we have endeavoured to build bridges between the climate sciences and the sociological sciences concerned with environmental impacts on human activities The geological sciences we felt are especially well suited to the purpose because they already comprise historical aspects *Preliminary Determination of Epicenters*, 1989-08 *New Perspectives on the Caledonides of Scandinavia and Related Areas* F. Palaeoweathering, Palaeosurfaces and Related Continental Deposits

Medard Thiry, Regine Simon Coincon, 2009-04-29 The study of palaeoweathering provides vital clues about past continental environments the correlation of sedimentary deposits and processes such as the rate and timing of uplift and erosion This volume based partly on research presented at IGCP 317 Palaeoweathering Records and Palaeosurfaces contains contributions that use both geochemical and physical approaches to the study of palaeoweathering problems The former are particularly relevant to our understanding of past climates and climate change the latter have applications in the understanding of mass balance between rates of erosion and deposition Palaeoweathering Palaeosurfaces and Related Continental Deposits illustrates the multidisciplinary nature of the subject the diversity of techniques and above all the vital contribution the subject makes to the reconstruction of ancient continental environments This book will be of great value to sedimentologists soil scientists and geomorphologists If you are a member of the International Association of Sedimentologists for purchasing details please see <http://www.iasnet.org/publications/details.asp?code=SP27> U.S. Geological Survey Circular, 1984 *The TBE Book* Prof. Dr. Gerhard Dobler, Dr. Wilhelm Erber, Dr. Michael Bröker, Prof. Dr. Heinz-Josef Schmitt, 2020-05-01 While the number of vector borne diseases and their incidence in Europe is much less than in

tropical and or developing countries there are nevertheless a substantial number of such infections in Europe The most important one is the zoonotic arbovirus infection Tick Borne Encephalitis TBE a virus transmitted to humans by ticks or by consumption of unpasteurized dairy products from infected cows goats or sheep TBE is endemic in the non tropical Eurasian forest belt with most cases occurring in Russia and in central and eastern parts of Europe In endemic areas TBE is one of the most important causes of viral meningitis encephalitis and a major public health concern Moreover TBE is becoming more and more frequent in Europe due to the appearance of new endemic areas and increasing awareness However it might be difficult to diagnose TBE because clinical manifestations tend to be relatively nonspecific Although a standardized case definition across the European Union has existed now for a few years national implementation of TBE programs including regular screening and diagnosis are done in only very few countries Therefore wide differences in the intensity and quality of national surveillance of TBE cases still exist and the true burden of disease and the areas with circulation of the TBE viral subtypes in Europe and Asia are not fully known Moreover although safe and effective vaccines are available vaccination uptake in most endemic countries is too low to reduce the TBE burden significantly The authors of The TBE Book therefore have tried to compile in this working book the most recent and relevant aspects of TBE

Global Change and Mountain Regions Uli M. Huber,Harald K.M. Bugmann,Mel A. Reasoner,2006-03-09 Mountain regions occupy about a quarter of the global terrestrial land surface and provide goods and services to more than half the humanity Global environmental change threatens the integrity of these systems and their ability to provide the goods and services upon which humanity has come to depend This book gives an overview of the state of research in fields pertaining to the detection understanding and prediction of global change impacts in mountain regions More than 60 contributions from paleoclimatology cryospheric research hydrology ecology and development studies are compiled in this volume each with an outlook on future research directions

Periglacial Landscapes of Europe Marc Oliva,Daniel Nývlt,José M Fernández-Fernández,2023-01-01 This book comprehensively presents the geography of landforms linked to periglacial processes across Europe The landscape of the European cold climate regions both at high latitudes and in mountainous environments represent the lingering minimal expression of the glaciers In addition periglacial elements can be found in temperate regions where temperatures no longer favor periglacial processes so landforms are therefore inherited from previous cold phases The book is divided into five parts an introductory section on climate variability responsible for periglacial dynamics across Europe a second part including 3 blocks on periglacial landforms in southern central and northern Europe and a final chapter providing a more general perspective on the impact of periglacial processes on the landscape of Europe The book offers a valuable reference guide for scientists from all disciplines interested in cold climate processes as well as readers outside academia territorial managers environmentalists mountaineers politicians engineers etc
