Southern Railway Miscellany:

Southern Railway Miscellany Kevin Robertson,2003-04-01 Although the Southern Railway existed for only a relatively short period from the Grouping in 1923 through to Nationalisation during that 25 year period it created a strong identity both among the travelling public and among its staff While much of the infrastructure and equipment used by the SR was inherited from the three constituent pre Grouping companies and survived to Nationalisation the SR was innovative in many ways from its widespread adoption of third rail electrification and its use of concrete through to its locomotive design particularly under Bulleid For the modeller obtaining photographic information is an essential part of gathering material to help construct the most realistic models While there is a considerable amount of material published on locomotives the quality of information on other topics station design train formation platform furniture rolling stock freight facilities tends to be much more variable The OPC Miscellany series was designed to circumvent this weakness by producing a range of high quality heavily illustrated books on individual railway companies providing modellers and historians with an excellent photographic record of the individual railway company and its many and varied operations This new addition to a popular series features the Southern Railway between 1923 and 1948 Drawing upon some 250 mono photographs Kevin Robertson examines in depth the railway and those aspects of the Southern that helped to make it readily identifiable to enthusiasts and modellers

The British railway network was a monument to Victorian private enterprise Its masterpieces of civil engineering were emulated around the world But its performance was controversial praised for promoting a high density of lines it was also criticised for wasteful duplication of routes This is the first history of the British railway system written from a modern economic perspective It uses counterfactual analysis to construct an alternative network to represent the most efficient alternative rail network that could have been constructed given what was known at the time the first time this has been done It reveals how weaknesses in regulation and defects in government policy resulted in enormous inefficiency in the Victorian system that Britain lives with today British railway companies developed into powerful regional monopolies which then contested each other's territories When denied access to existing lines in rival territories they built duplicate lines instead Plans for an integrated national system sponsored by William Gladstone were blocked by Members of Parliament because of a perceived conflict with the local interests they represented Each town wanted more railways than its neighbours and so too many lines were built The costs of these surplus lines led ultimately to higher fares and freight charges which impaired the performance of the economy The book will be the definitive source of reference for those interested in the economic history of the British railway system It makes use of a major new historical source deposited railway plans integrates transport and local history through its regional analysis of the railway system and provides a comprehensive classified bibliography
