Symbols And Meanings In School Mathematics:

Symbols and Meanings in School Mathematics David Pimm, 2002-11-01 *Symbols and Meanings in School Mathematics* explores the various uses and aspects of symbols in school mathematics and also examines the notion of mathematical meaning. It is concerned with the power of language which enables us to do mathematics giving us the ability to name and rename to transform names and to use names and descriptions to conjure, communicate and control our images. It is in the interplay between language, image and object that mathematics is created and can be communicated to others. The book also addresses a set of questions of particular relevance to the last decade of the twentieth century which arise due to the proliferation of machines offering mathematical functioning.

Modern Mathematics Dirk De Bock, 2023-03-08. The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century. It attracted the attention of local and international politicians, of teachers and of parents and influenced the teaching and learning of mathematics at all levels, kindergarten to college graduate, in many nations. After garnering much initial support, it began to attract criticism. But as Bill Jacob and the late Jerry Becker show in Chapter 17, some of the effects became entrenched. This volume, edited by Professor Dirk De Bock of Belgium, provides an outstanding overview of the New Math/modern mathematics movement. Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations. The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America. The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who, since

the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

What Should Schools Teach? Alka Sehgal Cuthbert , Alex Standis, 2021-01-07 The design of school curriculums involves deep thought about the nature of knowledge and its value to learners and society It is a serious responsibility that raises a number of questions What is knowledge for What knowledge is important for children to learn How do we decide what knowledge matters in each school subject And how far should the knowledge we teach in school be related to academic disciplinary knowledge These and many other questions are taken up in What Should Schools Teach The blurring of distinctions between pedagogy and curriculum and between experience and knowledge has served up a confusing message for teachers about the part that each plays in the education of children Schools teach through subjects but there is little consensus about what constitutes a subject and what they are for This book aims to dispel confusion through a robust rationale for what schools should teach that offers key understanding to teachers of the relationship between knowledge what to teach and their own pedagogy how to teach and how both need to be informed by values of intellectual freedom and autonomy This second edition includes new chapters on Chemistry Drama Music and Religious Education and an updated chapter on Biology A revised introduction reflects on emerging discourse around decolonizing the curriculum and on the relationship between the knowledge that children encounter at school and in their homes

The Math Instinct Keith Devlin, 2009-04-29 There are two kinds of math the hard kind and the easy kind The easy kind practiced by ants shrimp Welsh corgis and us is innate What innate calculating skills do we humans have Leaving aside built in mathematics such as the visual system ordinary people do just fine when faced with mathematical tasks in the course of the day Yet when they are confronted with the same tasks presented as math their accuracy often drops But if we have innate mathematical ability why do we have to teach math and why do most of us find it so hard to learn Are there tricks or strategies that the ordinary

person can do to improve mathematical ability Can we improve our math skills by learning from dogs cats and other creatures that do math The answer to each of these questions is a qualified yes All these examples of animal math suggest that if we want to do better in the formal kind of math we should see how it arises from natural mathematics From NPR's Math Guy The Math Instinct will provide even the most number phobic among us with confidence in our own mathematical abilities
