Symmetry And Complexity The Spirit And Beauty Of Nonlinear Science:

Symmetry And Complexity: The Spirit And Beauty Of Nonlinear Science Klaus Mainzer, 2005-06-10 Cosmic evolution leads from symmetry to complexity by symmetry breaking and phase transitions The emergence of new order and structure in nature and society is explained by physical chemical biological social and economic self organization according to the laws of nonlinear dynamics All these dynamical systems are considered computational systems processing information and entropy Are symmetry and complexity only useful models of science or are they universals of reality Symmetry and Complexity discusses the fascinating insights gained from natural social and computer sciences philosophy and the arts With many diagrams and pictures this book illustrates the spirit and beauty of nonlinear science In the complex world of globalization it strongly argues for unity in diversity

Digital And The Real World, The: Computational Foundations Of Mathematics, Science, Technology, And Philosophy Klaus Mainzer, 2017-11-17 In the 21st century digitalization is a global challenge of mankind Even for the public it is obvious that our world is increasingly dominated by powerful algorithms and big data But how computable is our world Some people believe that successful problem solving in science technology and economies only depends on fast algorithms and data mining Chances and risks are often not understood because the foundations of algorithms and information systems are not studied rigorously Actually they are deeply rooted in logics mathematics computer science and philosophy Therefore this book studies the foundations of mathematics computer science and philosophy in order to guarantee security and reliability of the knowledge by constructive proofs proof mining and program extraction We start with the basics of computability theory proof theory and information theory In a second step we introduce new concepts of information and computing systems in order to overcome the gap between the digital world of logical programming and the analog world of real computing in mathematics and science The book also considers consequences for digital and analog physics computational neuroscience financial mathematics and the Internet of Things IoT

Thinking in Complexity Klaus Mainzer, 2007-09-10 This new edition also treats smart materials and artificial life A new chapter on information and computational dynamics takes up many recent discussions in the community

Philosophy, Computing and Information Science Ruth Hagengruber, Uwe Riss, 2015-10-06 Over the last four decades computers and the internet have become an intrinsic part of all our lives but this speed of development has left related philosophical enquiry behind Featuring the work of computer scientists and philosophers these essays provide an overview of an exciting new area of philosophy that is still taking shape

The Universe as Automaton Klaus Mainzer, Leon Chua, 2011-10-01 This Brief is an essay at the interface of philosophy and complexity research trying to inspire the reader with new ideas and new conceptual developments of cellular automata Going beyond the numerical experiments of Steven Wolfram it is argued that cellular automata must be considered complex dynamical systems in their own right requiring appropriate analytical models in order to find precise answers and predictions in the universe of cellular automata Indeed

eventually we have to ask whether cellular automata can be considered models of the real world and conversely whether there are limits to our modern approach of attributing the world and the universe for that matter essentially a digital reality

Symmetry Measures on Complex Networks Angel Garrido, 2018-07-09 This book is a printed edition of the Special Issue Symmetry Measures on Complex Networks that was published in Symmetry

The Evolution of Time: Studies of Time in Science, Anthropology, Theology Argyris Nicolaidis, Wolfgang Achtner, 2013-05-27 Time a fundamental component of human thought and experience is quite enigmatic and elusive when it comes to defining it In The Evolution of Time Studies of Time in Science Anthropology Theology scholars from the fields of physics mathematics biology neuroscience psychology philosophy and theology draw from their own field of knowledge and expertise and present their understanding of the time phenomenon Time as a dynamic interplay of being and becoming the different temporalities we encounter in nature the human dimension of time are all important issues presented and thoroughly analyzed in the e book The e book has a manifest trans disciplinary character and it is a suitable for readers interested in evolution the dynamics of time and the complexity of our own conceptions of time

Imperfect Bifurcation in Structures and Materials Kiyohiro Ikeda, Kazuo Murota, 2019-09-25 Most physical systems lose or gain stability through bifurcation behavior This book explains a series of experimentally found bifurcation phenomena by means of the methods of static bifurcation theory

The Nonlinear Universe Alwyn C. Scott, 2007-10-02 Written in Alwyn Scott's inimitable style one that readers will find both lucid and accessible this masterwork elucidates the explosion of activity in nonlinear science in recent decades The book explains the wide ranging implications of nonlinear phenomena for future developments in many areas of modern science including mathematics physics engineering chemistry biology and neuroscience Arguably as important as quantum theory modern nonlinear science is essential for understanding the scientific developments of the twenty first century

Irreducibility and Computational Equivalence Hector Zenil, 2012-12-25 It is clear that computation is playing an increasingly prominent role in the development of mathematics as well as in the natural and social sciences The work of Stephen Wolfram over the last several decades has been a salient part in this phenomenon helping founding the field of Complex Systems with many of his constructs and ideas incorporated in his book A New Kind of Science ANKS becoming part of the scientific discourse and general academic knowledge from the now established Elementary Cellular Automata to the unconventional concept of mining the Computational Universe from today's widespread Wolfram's Behavioural Classification to his principles of Irreducibility and Computational Equivalence This volume with a Foreword by Gregory Chaitin and an Afterword by Cris Calude covers these and other topics related to or motivated by Wolfram's seminal ideas reporting on research undertaken in the decade following the publication of Wolfram's NKS book Featuring 39 authors its 23 contributions are organized into seven parts Mechanisms in Programs Nature Systems Based on Numbers Simple Programs Social and Biological Systems Technology Fundamental Physics The Behavior of Systems the Notion of Computation Irreducibility Computational
