Hedonics of Taste Robert C. Bolles, 2014-02-04 A study of hedonism could conceivably operate on a massive scale This book however concentrates specifically on the hedonics of taste The editor notes some important reasons for limiting the argument in this manner First of all this is an area of hedonics in which a handful of experimenters continued to do research during a period when hedonism might have been lost altogether Secondly the past ten years have seen quite a number of researchers turn their attention to taste preferences and so it seems appropriate to celebrate the fact that new findings can be incorporated into a very old conceptual framework the ancient concept of hedonism The contributors approach their subject from many different angles Historical conceptual and methodological chapters are presented developmental aspects psychological substrates and the social considerations of hedonics are discussed This volume offers viewpoints from dataphiles and theorists mechanists and cognitivists unifiers and disrupters a diversity that reflects the vital state of psychology today **Early Developmental Hazards** Frances Degen Horowitz, 2019-03-04 This book examines the

importance of prenatal birth and postnatal factors in determining the extent of risk that may be predicted for an infant in the first year of life and in early childhood It highlights the multiplicity of factors that contribute to survival in the developmental process **The Relation of Reported Preference to Performance in Problem Solving** Herbert Lloyd Bowman, 1929 Within the limits of this study certain tendencies with respect to preference and performance can be noted Individuals tend to select as a preference a problem out of a group of problems that they know or think will be more successful in solving The expectation of greater success leads individuals to prefer one problem over others and belief in success causes preference rather than preference being a cause of successful performance Problems dealing with actual childhood activities seem to be highly preferred by all pupils of the junior high school grades Interest in problem solving is enhanced by children working problems that are not too difficult and represent genuine childhood situations The relation between reported preference and performance is significant enough to demand attention when selecting problems for textbooks
