Anastasia Karandinou, 2018-11-12 The notion of data is increasingly encountered in spatial creative and cultural studies Big data and artificial intelligence are significantly influencing a number of disciplines Processes methods and vocabularies from sciences architecture arts are borrowed discussed and tweaked and new cross disciplinary fields emerge More and more artists and designers are drawing on hard data to interpret the world and to create meaningful sensuous environments Architects are using neurophysiological data to improve their understanding of people s experiences in built spaces Different disciplines collaborate with scientists to visualise data in different and creative ways revealing new connections interpretations and readings This often demonstrates a genuine desire to comprehend human behaviour and experience and to possibly inform design processes accordingly At the same time this opens up questions as to why this desire and curiosity is emerging now how it relates to recent technological advances and how it converses with the cultural philosophical and methodological context of the disciplines with which it engages Questions are also raised as to how the use of data and data

informed methods may serve support promote and or challenge political agendas Data Architecture and the Experience of Place provides an overview of new approaches on this significant subject and is ideal for students and researchers in digital architecture architectural theory design digital media sensory studies and related fields **Port of London** ,1925

Governing the London Region Donald L. Foley,2023-11-10 Governing the London Region Reorganization and Planning in the 1960s explores the significant transformation of London s metropolitan governance as part of a broader examination of urban government adaptation worldwide Faced with the complexities of burgeoning metropolitan populations and their interdependencies London undertook a substantial reorganization to address the demands of its growing urban expanse This reorganization rooted in extensive studies of urban governance across Britain underscores a shift away from simplistic consolidations toward a nuanced understanding of metropolitan government as an integral part of a national system Donald L. Foley s analysis situates London s reforms within a global context drawing connections between the challenges and solutions experienced in Britain and other major metropolitan regions like Toronto Stockholm and Paris Foley argues that London s efforts highlight a key principle metropolitan governance must balance local autonomy with coordinated regional and national involvement The book emphasizes that effective urban governance requires tailored approaches that consider historical institutional and cultural contexts By examining London s changes alongside broader urban governance initiatives Foley s work contributes valuable insights to the field of metropolitan studies offering lessons that resonate across varied urban landscapes As part of an ongoing series of studies on metropolitan regions this volume sets the stage for comparative analyses of global efforts to navigate the intricate demands of urban growth and governance in the 20th century This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1972
