*Southeast Asian Conference on Logic* C.-T. Chong, M.J. Wicks, 2011-10-10 The visit of Gerald Sacks to the National University of Singapore in 1981 provided an opportunity to organize a short conference in Mathematical Logic We were fortunate to receive encouragement and material support for this venture from several sources Specific acknowledgements are made below Sponsorship of the conference by the Association for Symbolic Logic was received and gave added inspiration A final word in this connexion concerns the debt we owe to invited speakers who were able to provide for travel expenses from their own resources Their presence at the conference would not have been possible otherwise The publication of these Proceedings came about through an initiative of North Holland The progress in producing the volume has been somewhat fitful and we appreciate their forbearance and understanding The items herein with some exceptions are written versions of invited talks given at the conference Abstracts of contributed papers have appeared in the Journal of Symbolic Logic The two workshops in Recursion Theory by Mark Tamthai and Model Theory by Chris Ash which were held in conjunction with the conference are not recorded We were fortunate to receive editorial assistance from John Bell during his visit to NUS A great debt is owed to Mimi Bell and Madam Lam for producing the splendid typescript for the volume

**Beyond First Order Model Theory, Volume I** Jose Iovino, 2017-08-14 Model theory is one of the central branches of mathematical logic The field has evolved rapidly in the last few decades This book is an introduction to current trends in model theory and contains a collection of articles authored by top researchers in the field It is intended as a reference for students as well as senior researchers

Connecting with Computability Liesbeth De Mol, Andreas Weiermann, Florin Manea, David Fernández-Duque, 2021-07-01 This book constitutes the proceedings of the 17th Conference on Computability in Europe CiE 2021 organized by the University of Ghent in July 2021 Due to COVID 19 pandemic the conference was held virtually The 48 full papers presented in this volume were carefully reviewed and selected from 50 submissions CiE promotes the development of computability related science ranging over mathematics computer science and applications in various natural and engineering sciences such as physics and biology as well as related fields

such as philosophy and history of computing CiE 2021 had as its motto Connecting with Computability a clear acknowledgement of the connecting and interdisciplinary nature of the conference series which is all the more important in a time where people are more than ever disconnected from one another due to the COVID 19 pandemic **Truth, Possibility**

**and Probability** R. Chuaqui,1991-06-20 Anyone involved in the philosophy of science is naturally drawn into the study of the foundations of probability Different interpretations of probability based on competing philosophical ideas lead to different statistical techniques and frequently to mutually contradictory consequences This unique book presents a new interpretation of probability rooted in the traditional interpretation that was current in the 17th and 18th centuries Mathematical models are constructed based on this interpretation and statistical inference and decision theory are applied including some examples in artificial intelligence solving the main foundational problems Nonstandard analysis is extensively developed for the construction of the models and in some of the proofs Many nonstandard theorems are proved some of them new in particular a representation theorem that asserts that any stochastic process can be approximated by a process defined over a space with equiprobable outcomes **Lectures on Infinitary Model Theory** David Marker,2016-10-27

Infinitary logic the logic of languages with infinitely long conjunctions plays an important role in model theory recursion theory and descriptive set theory This book is the first modern introduction to the subject in forty years and will bring students and researchers in all areas of mathematical logic up to the threshold of modern research The classical topics of back and forth systems model existence techniques indiscernibles and end extensions are covered before more modern topics are surveyed Zilber s categoricity theorem for quasiminimal excellent classes is proved and an application is given to covers of multiplicative groups Infinitary methods are also used to study uncountable models of counterexamples to Vaught s conjecture and effective aspects of infinitary model theory are reviewed including an introduction to Montalb n s recent work on spectra of Vaught counterexamples Self contained introductions to effective descriptive set theory and hyperarithmetic theory are provided as is an appendix on admissible model theory **Rough Sets, Fuzzy Sets, Data Mining, and Granular**
