This book is intended for designers with experience in traditional clocked circuit design seeking information about asynchronous circuit design in order to determine if it would be advantageous to adopt asynchronous methodologies in their next design project The author introduces a generic approach for implementing a deterministic completion detection scheme for asynchronous bundled data circuits that incorporates a data dependent computational process taking advantage of the average case delay The author validates the architecture using a barrel shifter as shifting is the basic operation required by all the processors The generic architecture proposed in this book for a deterministic completion detection scheme for bundled data circuits will facilitate researchers in considering the asynchronous design style for developing digital circuits
