Urbanism, and Heritage Studies Editors: Hourakhsh Ahmad Nia and Rokhsaneh Rahbarianyazd, 2023-09-28 In the field of architecture urbanism and heritage studies the realm of contemporary ideas is in a constant state of evolution reflecting the dynamic nature of our surrounding world Amidst this intricate tapestry this collection of book chapters appropriately titled *Convergence of Contemporary Thought in Architecture Urbanism and Heritage Studies* emerges as a guiding light through a maze of concepts challenges and imaginative solutions The chapters within this volume traverse the globe exploring diverse cultural geographical and temporal settings Each chapter offers distinctive perspectives on various facets of the constructed environment ranging from the preservation of architectural heritage to the modeling of urban energy consumption from the fusion of traditional and innovative approaches to the consequences of human habitation on natural ecosystems **Knots in Hellas '98 - Proceedings of the International Conference on Knot Theory and Its Ramifications** V. F. R. Jones, 2000 There have been exciting developments in the area of knot theory in recent years They include Thurston's work on geometric structures on 3 manifolds e g knot complements Gordon Luecke work on surgeries on knots Jones work on invariants of links in S^3 and advances in the theory of invariants of 3 manifolds based on Jones and Vassiliev type invariants of links Jones ideas and Thurston's idea are connected by the following path hyperbolic structures PSL $2, \mathbb{C}$ representations character varieties quantization of the coordinate ring of the variety to skein modules i e Kauffman bracket skein module and finally quantum invariants of 3 manifolds This proceedings volume covers all those exciting topics *The Visual Mind II* Michele Emmer, 2005 This collection of essays by artists and mathematicians continues the discussion of the connections between art and mathematics begun in the widely read first volume of *The Visual Mind* in 1993 **BOOK JACKET The Mathematical Mind of F. M. Dostoevsky** Michael Marsh-Soloway, 2024-11-19 *The Mathematical Mind of F M Dostoevsky* Imaginary Numbers Non Euclidean Geometry and Infinity reconstructs the curriculum and readings that F M Dostoevsky encountered during his studies and connects such sources to the mathematical references and themes in his published works Prior to becoming a man of letters Dostoevsky studied at the Main Engineering School in St Petersburg from 1838 to 1843 After he was arrested submitted to mock execution by firing squad and sentenced to penal servitude in Siberia for his involvement in the revolutionary Petrashevsky Circle in 1849 most of his books and journals from the period of his education were confiscated and destroyed by the Third Section of the Russian Secret Police Although most scholars discount the legacy of his engineering studies the literary aesthetics of his works communicate an acute awareness of mathematical principles and debates This book unearths subtexts in works by Dostoevsky communicating veins of mathematical thought that evolved throughout Classical Antiquity the Renaissance and the Scientific Revolution *Complexity* Andrea Gleiniger, Georg Vrachliotis, 2012-11-05 Digitalization has transformed the discourse of architecture that discourse is now defined by a wealth of new terms and concepts that previously either had no meaning or had different meanings in the context of architectural theory and design Its concepts and strategies are increasingly shaped by influences emerging at the intersection with

scientific and cultural notions from modern information technology The series Context Architecture seeks to take a critical selection of concepts that play a vital role in the current discourse and put them up for discussion When Vitruvius described the architect as a *uomo universale* he gave rise to the architect's conception of him or herself as a generalist who shapes a complex reality The architectural concept of complexity however failed to keep pace with industrial and social reality becoming instead an increasingly formal and superficial notion that could ultimately be applied to almost anything Against it architectural modernism set the watchword of simplification less is more In this situation Robert Venturi reintroduced the notion of complexity into architectural discourse his goal was not just to restore the complexity of architectonic forms and their history but also to explore the concrete reality of the existing built environment Today it is complexity studies with their starting point in physics that define the current approach to the concept of complexity They have established a new connection between the natural sciences and information technology and have thus become a central premise of computer based approaches to design

Truth Or Beauty David Orrell, 2012-11-27 Questions the promises and pitfalls of associating beauty with truth showing how ideas of mathematical elegance have inspired and have sometimes misled scientists attempting to understand nature The author also shows how the ancient Greeks constructed a concept of the world based on musical harmony

Representation and Productive Ambiguity in Mathematics and the Sciences Emily R. Grosholz, Emily Grosholz, 2007-08-30 Emily Grosholz offers an original investigation of demonstration in mathematics and science examining how it works and why it is persuasive Focusing on geometrical demonstration she shows the roles that representation and ambiguity play in mathematical discovery She presents a wide range of case studies in mechanics topology algebra logic and chemistry from ancient Greece to the present day but focusing particularly on the seventeenth and twentieth centuries She argues that reductive methods are effective not because they diminish but because they multiply and juxtapose modes of representation Such problem solving is she argues best understood in terms of Leibnizian analysis the search for conditions of intelligibility Discovery and justification are then two aspects of one rational way of proceeding which produces the mathematician's formal experience Grosholz defends the importance of iconic as well as symbolic and indexical signs in mathematical representation and argues that pragmatic as well as syntactic and semantic considerations are indispensable for mathematical reasoning By taking a close look at the way results are presented on the page in mathematical and biological chemical and mechanical texts she shows that when two or more traditions combine in the service of problem solving notations and diagrams are subtly altered multiplied and juxtaposed and surrounded by prose in natural language which explains the novel combination Viewed this way the texts yield striking examples of language and notation that are irreducibly ambiguous and productive because they are ambiguous Grosholtz's arguments which invoke Descartes Locke Hume and Kant will be of considerable interest to philosophers and historians of mathematics and science and also have far reaching consequences for epistemology and philosophy of language
