Planning and Architectural Design of Integrated Services Digital Networks A. Nejat Ince, Dag Wilhelmsen, Bülent Sankur, 2012-12-06 Planning and Architectural Design of Integrated Services Digital Networks: Civil and Military Applications provides a comprehensive treatment of ISDNs: how to plan and design them architecturally and how to implement them so that they meet certain given user requirements ranging from a variety of service demands to transmission performance, security, reliability, availability, capability for growth, interoperability with other ISDN and non-ISDN networks, and of course cost. The book concentrates on the application of ISDN concepts and standards to the planning and design of real-costed networks to meet certain specified user requirements. Where there are multiple options, considerations and rationale on the choice of network aspects and standards are discussed. The unique feature of the book compared with other books on ISDN is that it expounds an original methodology which starts from an assumed or given set of complete user requirements and proceeds to designing a complete network taking into account the technology and standards of ISDN as well as some constraints including cost which may be imposed. Planning and Architectural Design of Integrated Services Digital Networks describes computer-aided design tools employed for dimensioning the network for various traffic loads and for assessing its traffic-carrying performance for assessing different precedence categories and network configurations, transmission conditions and routing algorithms which may be static, deterministic or dynamic adaptive. Aspects such as surveillance and control, security, survivability and EMP protection are also addressed. Planning and Architectural Design of Integrated Services Digital Networks: Civil and Military Applications is an excellent reference source and may be used as a text for advanced courses on the subject.
