George Zebrowski, author of the best-selling novel *OMEGA POINT*, is a unique and creative talent whose thoughtful and entertaining works have generated great critical praise and gained him a devoted following of readers.

One of these fans is Thomas N. Scortis, who writes in the introduction to this volume: "I have watched George Zebrowski's body of work grow for five years. The distance he has travelled in half a decade is impressive. The rate at which his talent is growing makes me impatient to see the product of his talent twenty years from now.... I have watched Zebrowski grow artistically to become one of the leaders of the new generation of science fiction writers...."

The Monadic Universe George Zebrowski, 1985 **A Theory of Monads** Herbert Wildon Carr, 1922 **The Science of Monads** Mike Hockney, 2015-07-31

Scientific materialism isn't the only type of science. Leibniz, the great German genius, was a champion of scientific idealism. The atoms in his system weren't physical but mental, and he named them monads. A present-day Leibniz might say: All things are made from mental atoms, which are simple mathematical substances from which all compounds are mathematically derived via the laws of ontological mathematics. Monads are expressed through constant motion, and that mental motion is what we call thinking. Pure thinking takes place in an immaterial mathematical frequency domain outside space and time. By virtue of Fourier mathematics, frequency functions can be represented in a spacetime domain, and this domain is what is known as the physical world of matter. It is just a certain mode of mental functionality. There is no such thing as scientific matter. There is only mind. A mind is a monad, and monads are all there are. Everything is an expression of monadic mental mathematics.

The Monad Manifesto Dennis William Hauck, 2022-03-08

The Monad is the indivisible single source of consciousness and information that created our universe. In philosophy, the Monad is the origin of all things, the totality of both our present existence and all possible future incarnations. For theologians, it is the Word of God that created the world. In mathematics, the Monad is the archetypal origin of all the numbers and geometric shapes that describe Nature. Computer scientists view it as the cosmic code embedded in the matrix of reality. In science, the Monad is the Singularity, the Big Bang explosion of light and consciousness from which our universe sprung forth. In *The Monad Manifesto*, we explore the mysterious monadic origin of the universe and its relationship to the field of conscious awareness that we all share. The book is organized into a central Manifesto and ancillary chapters that expand and document the ideas presented. These chapters include: The Monad in Philosophy, The Monad in Science, The Monad in Mathematics, and Monad Cosmology. We will also explore the ways people experience monadic reality in the chapter *Monadic Experiences*. Then we will learn methods of meditation developed down through the ages to connect to the Source in *Monad Meditations*.

Hyperculture Byung-Chul Han, 2022-01-10

In the wake of globalization, cultural forms of expression have become increasingly detached from their places of origin, circulating in a hyperdomain of culture where there is no real difference anymore between indigenous and foreign, near and far, the familiar and the exotic. Heterogeneous cultural contents are brought together side by side, like the fusion food that makes free use of all that the hypercultural pool of spices, ingredients, and ways of preparing food has to offer. Culture is becoming unbound, unrestricted, unraveled: a hyperculture. It is a profoundly rhizomatic culture of intense hybridization, fusion, and co-appropriation. Today we have all become hypercultural tourists, even in our own culture to which we do not even belong anymore. Hypercultural tourists travel in the hyperspace of events, a space of cultural sightseeing. They experience culture as a cultural tour. Drawing on thinkers from Hegel and Heidegger to Bauman and Homi Bhabha, to examine the characteristics of our contemporary hyperculture, Han poses the question: should we welcome the human of

the future as the hypercultural tourist smiling serenely or should we aspire to a different way of being in the world **The Vibrating Universe** Nṛsiṃhacarāṇa Paṇḍā,1995 The Vibrating Universe synthesizes the superstring theory of modern physics and the vibration concept of advaita vedanta and Kashmiri Saivism The philosophical problem of monism versus pluralism as given in Indian philosophy Western philosophy and classical as well as modern science has been analytically presented In this attempt dualism and pluralism have been rejected and non dualism has been re established A vibration theory has been successfully brought out with a fusion of the doctrines of the vedantic vibration the saiva vibration and the superstring vibration of modern physics A confluence of the concepts of the non dualistic Vedanta Kashmiri Saiva monism cosmology astrophysics superstring theory reality theory and quantum mechanics is clearly visible in the book As the vibrations of a violin string produce multiplicity of musical notes so does the superstring that vibrates and thereby generates the apparent plurality of the universe The Reality is one and only one that always remains unmanifested and unperceived although not unexperienced The power of the Reality manifests through the plurality of the phenomenal universe Maya or Prakṛti is constituted of three strings sattva rajas and tamas that vibrate to produce the pluralistic phenomenal universe

Leibniz's Metaphysics of Time and Space Michael Futch,2008-04-05 Leibniz's metaphysics of space and time stands at the centre of his philosophy and is one of the high water marks in the history of the philosophy of science In this work Futch provides the first systematic and comprehensive examination of Leibniz's thought on this subject In addition to elucidating the nature of Leibniz's relationalism the book fills a lacuna in existing scholarship by examining his views on the topological structure of space and time including the unity and unboundedness of space and time It is shown that like many of his more recent counterparts Leibniz adopts a causal theory of time where temporal facts are grounded on causal facts and that his approach to time represents a precursor to non tensed theories of time Futch then goes on to situate Leibniz's philosophy of space and time within the broader context of his idealistic metaphysics and natural theology Emphasizing the historical background of Leibniz's thought the book also places him in dialogue with contemporary philosophy of science underscoring the enduring philosophical interest of Leibniz's metaphysics of time and space **Model-Theoretic Logics** J. Theory Marcoen Cabbolet,2022-07-20 On the one hand theories of modern physics are very successful in their areas of application But on the other hand the irreconcilability of General Relativity GR and Quantum Electrodynamics QED suggests that these theories of modern physics are not the final answer regarding the fundamental workings of the universe This monograph takes the position that the key to advances in the foundations of physics lies in the hypothesis that massive systems made up of antimatter are repulsed by the gravitational field of a body of ordinary matter this hypothesis takes us to an uncharted territory where GR and QED do not hold up From there the Elementary Process Theory EPT is developed this is

a collection of seven generalized process physical principles that do hold up if the hypothesis is a fact of nature Using four dimensionalistic terminology the EPT abstractly describes an elementary process in the temporal evolution of a massive system that interacts with its environment The idea is that these elementary processes take place at Planck scale and are essentially all the same regardless of the type of interaction that takes place the EPT is thus intended as a candidate for a unifying scheme that applies to all four basic interactions By mathematical modeling the relation is explored between the EPT and classical mechanics quantum mechanics special relativity and GR
