Reflections on the Musical Mind Jay Schulkin, 2013-07-28. What is so special about music? We experience it internally yet at the same time it is highly social. Music engages our cognitive, affective and sensory systems. We use music to communicate with one another and even with other species the things that we cannot express through language. Music is both ancient and ever evolving. Without music our world is missing something essential. In *Reflections on the Musical Mind* Jay Schulkin offers a social and behavioral neuroscientific explanation of why music matters. His aim is not to provide a grand unifying theory. Instead the book guides the reader through the relevant scientific evidence that links neuroscience, music and meaning. Schulkin considers how music evolved in humans and birds, how music is experienced in relation to aesthetics and mathematics, the role of memory in musical expression, the role of music in child and social development and the embodied experience of music through dance. He concludes with reflections on music and well-being. *Reflections on the Musical Mind* is a unique and valuable tour through the current research on the neuroscience of music.

Musical Identities Raymond A. R. MacDonald, David J Hargreaves, Dorothy Miell, 2002-07-18. Music is a tremendously powerful channel through which people develop their personal and social identities. Music is used to communicate emotions, thoughts, political statements, social relationships and physical expressions. But just as language can mediate the construction and negotiation of developing identities, so music can also be a means of communication through which aspects of people's identities are constructed. Music can have a profound influence on our developing sense of identity, our values and our beliefs, whether from rock music, classical music or jazz. Different research studies in social and developmental psychology are beginning to chart the various ways in which these processes occur and this is the first book to examine the relationship between music and identity. The first section focuses on *Developing Musical Identities* and deals with the ways in which individuals involved in musical participation develop personal identities that are intrinsically musical. Chapters include *The self identity of young musicians*, *Musical identities and the school environment* and *Personal identity and music: a family perspective*. The second section deals with *Developing Identities Through Music* and contains chapters on *Gender identity and music*, *National identity and music* and *Music as a catalyst for changing personal identity*. This is the first book to deal with musical identity from a psychological perspective and will be fascinating and important reading for postgraduate and research psychologists in social, developmental and music psychology. The book will also appeal to those within the applied fields of health and educational psychology, music education and music therapy.
